Yarn OGL SRD.....	81

Introduction

Yarn is an experiment to see if WaRP System and Drama System can be mashed up into a coherent system for a game that supports procedural play alongside Drama Systems focus on inter character interaction.

Procedural elements now require more preparation for the GM so I've made a small number of changes to the Drama system elements that make it a little more GM led.

I've left all parts of WaRP in place although they focus settings towards a modern setting. It should be easy enough to remove those elements to an appendix and I may do in an update.

Components

To play this game, you need:

- ✦ 5 – 8 participants
- ✦ at least one six sided dice (more if available)
- ✦ a supply of poker chips or beads (about a dozen tokens)
- ✦ as many index cards (or spare playing cards or collectible game cards) as you have players
- ✦ writing utensils
- ✦ scrap paper

Order of Precedence

From time to time, the GM determines precedence—an order in which the players act.

Before play begins, write your player's names on index cards, one card per player. Whenever you need a precedence order, shuffle them and note the result.

Creating Characters

Character Checklist

Your character includes:

- Name
- Role in Group
- Relationships
- A Desire
- Dramatic Poles
- Wants
- Traits
 - One Central Trait
 - Two Side Traits
- A Flaw
- Signs (One per Trait and one for your flaw)
- Hit Points
- Experience Pool
- Finance and Equipment

Step By Step

1. The Game Moderator briefly encapsulates the series setting and premise, defining the group from which the main player characters are drawn.
2. GM determines precedence.
3. First player in order proclaims his/her character's name and role in the group.
4. Second player proclaims his/her character's name, role in the group, and relationship to first character. Players notate relationships on relationship maps.
5. Third player proclaims his/her character's name, role in the group, and relationship to all other proclaimed characters.
6. According to precedence, remaining players repeat above step.
7. In the established order of precedence, players proclaim their desires.
8. In the same order, players define their characters' dramatic poles.

9. GM chooses a new precedence order.
10. First player in new precedence defines what his/her character wants from any other player's character.
11. The player of the other character defines why they can't get it.
12. Both players adjust the statement as needed to reflect first character's understanding of the situation.
13. Repeat steps 10-12 for each remaining player in precedence.
14. Repeat steps 9-12 until all characters are named as objects of at least two other characters' wants. (Any unaddressed relationships are defined during play.)
15. Each player define their Traits
16. Each player defines their Flaw
17. Each player defines their Signs
18. Each player finds their Hit Points
19. Each player sets their Experience Pool
20. Each player outlines their Finances & Equipment
21. Based on what they now know about their characters, especially their dramatic poles, players complete the statement, *"My story is of a man/woman who..."*
22. With a renewed order of precedence and an initial scene framing, play begins.

Role in the Group

The main cast of player characters (PCs) in *DramaSystem* belongs to a group, which may be closely-knit or loosely affiliated. Players are free to define their characters' role in the group however they choose.

Defining Relationships

When you define your relationship to another PC, you establish a crucial fact about both characters. You can make it any kind of relationship, so long as it's an important one. Family relationships are the easiest to think of and may prove richest in play. Close friendships also work. By choosing a friendship, you're establishing that the relationship is strong enough to create a powerful emotional bond between the two of you. Bonds of romantic love, past or present, may be the strongest of all.

As in any strong drama, your most important relationships happen to be fraught with unresolved tension. These are the people your character looks to for emotional fulfillment. The struggle for this fulfillment drives your ongoing story.

Defining one relationship also determines others, based on what has already been decided.

Players may raise objections to relationship choices of other players that turn their PCs into people they don't want to play. When this occurs, the proposing player makes an alternate suggestion, negotiating with the other player until both are satisfied. If needed, the GM assists them in finding a choice that is interesting to the proposing player without imposing unduly on the other.

Keep track of relationships as they are established during character creation with the Relationship Map page of your character sheet. Represent each character as a name with a box or circle around it. Place your character in the center of the sheet. Draw a line from your character to each other PC. Label the line with the nature of the relationship. As relationships between other PCs are established, connect them and label the connection lines as well.

Your Desire

A PC's desire is the broadly stated, strong motivation driving his actions during dramatic scenes. The desire moves him to pursue an inner, emotional goal, which can only be achieved by engaging with other members of the main cast, and, to a lesser degree, with recurring characters run by the GM. Your desire might be seen as your character's weakness: it makes him vulnerable to others, placing his happiness in their hands. Because this is a dramatic story, conflict with these central characters prevents him from easily or permanently satisfying his desire. Think of the desire as an emotional reward your character seeks from others. The most powerful choices are generally the simplest:

- ♣ approval
- ♣ acceptance

- ✧ forgiveness
- ✧ respect
- ✧ love
- ✧ subservience
- ✧ reassurance
- ✧ power
- ✧ to punish
- ✧ to be punished

Your Dramatic Poles

Driving any compelling dramatic character in any story form is an internal contradiction. The character is torn between two opposed dramatic poles. Each pole suggests a choice of identities for the character, each at war with the other. Events in the story pull the character from one pole to the next.

What You Want From Others

Now bring your dramatic poles into specific focus by declaring what they lead you to seek from particular other PCs.

The sooner you define a want, the more important it is to you. The first and second PCs you name as your withholders of emotional reward are your **fraught relationships**. List these first in the “People In My Life” section of your character sheet. Also, mark your fraught relationships by circling or highlighting them on your relationship map. If you find it a useful memory aid, include a notation describing the emotional reward you seek.

Traits

Each character has four traits. One trait is the character’s central trait, usually defining who that character is. Two traits are side traits, additional skills or characteristics. Of the above three traits, one is chosen as superior. The last trait is a flaw or disadvantage. Each of the four traits entails a sign, some visible or tangible aspect of that trait.

Central Trait

First, you have one central trait, essentially your identity — who you are, what you do. This trait can take into account a variety of aptitudes, skills, or characteristics. When you, as a player, describe your character, you are likely to use this trait as the central concept.

Many characters will have a central trait that relates directly to or is the same as their role in the group.

For example, “I’m a model,” or “I’m a former secret agent.” If you want to be something weird, this trait must cover that identity. A central trait includes the name of the trait followed by a description, then in parentheses sign(s) that are associated with the trait. Numbers at the end of the description indicate the number of dice that would be assigned to that trait normally (the first, lower number) and how many dice would be assigned if it is the character’s superior trait (the second, larger number; see later for an explanation of superior traits). If the scores listed are “4/6,” this represents higher than normal scores for “narrow” traits. See that optional rule later in this section.

An example central trait might be:

Military Background — Includes fighting bare-handed and with a variety of weapons, first aid, keeping cool under fire, and possibly one specialty field, such as mechanics or demolitions. (Wears camo clothes, or battle scars) 3/4

If you want to have an unusual character, perhaps the kind of thing that does not exist in the real world (like an alien), you must take that trait as your central trait. Give the trait a name and description, being sure to be clear to the GM what skills, abilities, and characteristics this trait covers. If you have a weird, unusual power, the GM may give you a “psychic pool,” which represents how many times per day you can use that power. This pool may contain 3 shots (uses per day), or you can roll a die to see how many shots it contains. (If you have several fringe powers, you can roll the die once for each and take the highest roll.) GM rules for fringe abilities are found later in this document.

Side Traits

Once you have your central, identifying trait chosen, choose two side traits. They may or may not be related to your central trait. Unlike the central traits, these side traits are very specific, representing discrete characteristics or skills.

If a character's central trait isn't directly related to their role in the group one of their side traits usually will be.

Just because a trait is your “side trait” does not mean it is insignificant to your character. For example, a professor with the side trait of “hack writing” might be pursuing her writing career, and her attempts to gain inspiration for her fiction may be more important in play than her teaching career. Indeed, she may be better at writing than teaching.

A side trait includes the name of the trait followed by a description, then in parentheses sign(s) that are associated with the trait. Numbers at the end of the description indicate the number of dice the character receives for a normal and superior version of that trait, respectively. If the scores listed are “4/6,” this represents higher than normal scores for “narrow” traits. See that optional rule later in this section.

An example side trait might be:

Tough — Resist poisons, pain, and fatigue. (Big-boned) 3/4

Any unusual type of power, usually called “magical” or “psychic,” is a fringe power. Most likely you have a “psychic pool,” representing the number of times per day you can use this power. You can have 3 shots in your pool, or roll a die to determine the number of shots. If you have several fringe powers, you can roll the die once for each and take the highest roll. Give yourself a side trait with the name and description of the power. The sign for a fringe power depends on the nature of the power, and its dice scores are usually 1/2. GM rules for fringe abilities are found later in this document.

More About Traits

The GM looks over your traits and may veto or edit any that she judges to be out of order. She’ll probably allow traits like “Exceptionally tough,” but might disallow “Completely impervious to all manner of attack, damage, threat to life, or heartache.”

Take care in naming your trait. Make each unique. If your character is to have a way with words, is she “well-spoken,” “manipulative,” or “silver-tongued”? While the distinctions among terms may be slight, they affect your perception of the character and can affect the character’s abilities in special circumstances.

Optional Rule: Unknown Traits

An interesting way to speed up character creation and bring some mystery to the process is to identify certain traits as unknown to you and to the character. For example, you might be an escapee from an experimental mental illness treatment that has given you powers that you don’t even know much about yet. In that case, tell your GM that you want one or more of your traits undefined at the start. Or your motivation might be to follow certain clues, the significance of which you do not yet fully understand. Your GM might well appreciate the freedom that this tactic gives her in manipulating your character into the plots that she will lay for you and your fellow players.

Optional Rule: Narrow Traits

Some players may wish to invent PCs with traits that are important to characterization but are of marginal use in the dangerous game world.

For example, a character may wish to be a painter. This trait is nowhere near as useful as “good fighter,” “tough,” and so forth, so the GM may award the PC with extra dice in that score, to compensate partially for the trait’s marginal usefulness. Traits such as “chess,” “folksinger,” and “telling ghost stories” may be considered narrow. No fighting skill counts as “narrow.” For “narrow” traits, use the charts below to see how the scores work.

Scores for Traits

Now you have your three positive traits: one central trait and two side traits. Next, you must assign a score to each. The score represents how many dice you roll when using the trait. Two factors determine your score for a given trait: whether it is “superior”, and whether it is the kind of trait that most people normally have. (See also the optional rule for “narrow” traits.)

First, you choose one of your three traits to be superior. Choose the one you like the most or think is most important to your character.

Most traits are better or worse versions of traits the average person has. For instance, a strong character is stronger than average, but even the average person has some strength. Some traits, however, are unusual or technical, and the average person has no skill (0 dice) in that trait. If this is the case, a character with this trait has fewer dice than normal, to represent the fact that he would normally have no dice at all in that trait. Medicine, channeling, and quantum physics are examples of technical or unusual traits.

See the charts below for specifics. Below the label for the kind of trait are a few examples of traits that fall in that category. “Superior” indicates your score if this trait is your superior trait. “Good” indicates your score if you have chosen the trait, but not as your superior trait. “Average” means the score for someone who does not have that trait at all.

If the trait is not related to a score, make sure you and the GM agree to what this trait means.

Standard Trait: Stealth, strength, straight-facing

Technical or Unusual Trait : Doctor, fringe powers

Narrow Trait: Public speaking, cooking

Narrow & Technical Trait: Helicopter pilot, dentistry

	Standard Trait	Technical or Unusual Trait	Narrow Trait	Narrow & Technical Trait
Superior	4 dice	2 dice	6 dice	4 dice
Good	3 dice	1 dice	4 dice	2 dice
Average	2 dice	0 dice	2 dice	0 dice

Flaws

Once you have determined your first three traits (the central trait and two side traits), decided which of those three is your superior trait, and assigned scores appropriately, it is time to choose a flaw. A flaw is any disadvantage that your character will have in play. It must be important enough that it actually comes into play and makes a difference. Ideally, your flaw should be something directly related to your central trait or side traits, or to your character concept, rather than just a tack-on disadvantage.

Often a flaw causes one to roll penalty dice in relevant situations. Other flaws cause problems that the player simply must roleplay.

A flaw includes the name of the trait followed by a description, then in parentheses sign(s) that are associated with the trait.

An example flaw might be:

Prone to Reckless Violence — When frustrated, there is a one in six chance that the character will fly into a fit of uncontrollable rage.

(Sullen demeanor)

Signs

For each trait, including your flaw, describe one sign related to it that others can notice. Use these signs when describing your character. That way you can tell other players, “I’m a tall, slim man who walks with a confident gait and wears a strange gold medallion around his neck.”

Isn’t that better than, “I’m agile; I come from a wealthy British family; and I dabble in magic”? Some signs are not always apparent. They might appear when you use the trait in question, or only occasionally.

Hit Points

Your “hit points” represent the amount of punishment, damage, and pain you can take and still keep going. The more hit points you have, the harder you are to take down.

Hit points are determined by any trait you may have that is relevant to fighting, toughness, strength, mass, or other aspect of your character that indicates the ability to take damage. If this trait is ranked as 4 dice, your hit points are 28. If ranked as 3 dice, your hit points are 21.

Lacking such a trait, your hit points are 14. (You do not have fewer than 14 hit points for having a trait like “weak.”)

You get 7 points per die, and that relationship makes it easy to roll your hit points randomly, if you want. Simply roll double the number of appropriate dice (e.g. 6 dice for a trait ranked as 3 dice), and your total is your hit points.

If you have more than one trait that could affect your hit points, roll for each trait separately and take the highest roll for your total. For example, if you are a 4 die martial artist and also have 3 dice strength, you could roll eight dice and six dice, using whichever roll results in the higher figure.

If you have two traits related to hit points, you can take one of them as “average.” Don’t roll for it at all; just take the hit points listed above. Then roll for the other, using the result only if you actually roll over the average score for the first trait. The strong martial artist in the example above could take 28 points for his 4 dice of martial arts and then roll six dice for being strong, taking whichever result is higher. Or he could take 21 points for being strong and then roll eight dice for the martial arts, again taking the higher result. To be fair, you must decide whether you are rolling or taking the average hit points for any trait before you begin rolling for any others. The strong martial artist could not first roll the six dice for being strong and then decide whether to roll the eight dice for martial arts ability.

Once you've determined your hit points, attach a descriptive word or phrase to them to represent what they mean for your character. For instance, a strong character might call his "brawn," indicating that his resilience in the face of physical punishment comes from his well developed musculature. Another character's hit points might be "guts," relating to sheer internal toughness and resolve, rather than to any purely physical trait.

Descriptions of hit points also give your character more personality. A character who can take a lot of punishment because he is determined is conceptually different from someone who keeps going because he is too big (or too stupid) to notice his wounds.

The GM can also use your description of your hit points to bend the rules to fit an unusual situation. For instance, imagine a weapon that stimulates pain nerves on contact. A big guy's hit points might not be too effective against the attack, since increased size might just mean he has more pain nerve endings; but someone whose hit points come from being determined might be able to shrug off the pain and keep going. (In this example, the GM can either penalize the big guy to keep his extra hit points from protecting him, or give a bonus to the determined character to represent his superior resistance to pain.)

Experience Pool

As a beginning character, you have one die in your experience pool. This means that once per game session you can use this die as a bonus die on any roll you make, improving your chances for success. Once you use this die, you cannot use it again for the rest of the session.

The experience die represents your experience, will, wits, and special circumstances. You must justify the use of the die in these terms. For example, to block a knife thrust you might say, "This has got to be the third knife-fight I've been in this week, and I'm getting used to it." If

the GM does not tell you what a roll is for, you cannot use an experience die to modify it because you cannot justify its use. As the series progresses and you become more experienced, the GM will award you more dice for your experience pool to represent the experience gained. That means you can improve more of your rolls each session, but you cannot use more than one die on a single roll. Once a die is used, you may not use it again for the rest of the game session.

As you gain more dice in your pool, you can "trade them in" for improved traits. See the rules for experience later in this section

Optional Rule: Multiple Experience Dice

The GM may allow you to use more than one experience die, but only if you can give one good justification for each die that you intend to use. You only use a bonus die for each justification that the GM accepts, and the GM may refuse to use this optional rule altogether.

Finances & Equipment

Fill in all the details you want about your character's background. List the possessions the character has and have some idea of the financial resources he will have. Choose items and finances appropriate to the character **concept**.

Approval

The GM should look over every character before approving it for play. Don't allow any traits that would put control of the in the hands of a single player. The GM can put a trait to a vote of the other players or can veto it.

Your Story

Given what you've now discovered about your character, complete the sentence: *My story is of a man/woman who...*

The sentence should evoke your desire, and possibly your central relationships and contradiction. It serves as a reminder to keep you focused on the story you, taking into account the collaboration of other group members, have resolved to tell. If your sentence is more than 25 words long, your idea isn't simple enough. Adjust the introductory clause a little if it makes for a clearer, shorter sentence.

Episodes

Each session presents an **episode**—a series of loosely connected scenes.

Themes

Distinguishing each episode is a **theme** for participants to weave, loosely or obviously, into its events. At the end of the first session, the GM chooses the next precedence ranking. It sets out the order in which players choose the themes for the following episodes. The first player in the precedence order chooses the theme for the second session, the second choose for the third session, and so on. Once everyone has had a chance to pick a theme, start over again, continuing in this order until the series comes to its conclusion.

The Player choosing the theme for the next episode should make their selection at the end of the previous session.

Scenes

Each episode consists of a number of scenes:

- ✦ an **opener** that introduces the theme
- ✦ an indeterminate number of **development** scenes that riff on and refer to the theme in various ways
- ✦ a **closer** that somehow completes the theme—or ends organically, on a cliffhanger, conclusive line, or other exciting moment

Calling Scenes

Each scene begins by throwing to a player who then **calls** the scene, laying out the parameters under which it unfolds. These are:

- ✦ **Cast:** names the main or recurring characters taking part in the scene. To cast a scene your player character is not in costs you a drama token (p . 26.)
- ✦ **Setting:** where the scene takes place (at least at its outset; a scene can shift in time and place as it unfolds)
- ✦ **Time break** (if any): by default, scenes are assumed to take place shortly after, or concurrently with, the previous scene. If you want to jump ahead in time, say so, and by how much. Time breaks are susceptible to challenge (see below.)
- ✦ **Mode:** Indicate whether this is a primarily **dramatic** scene, in which a PC or recurring character pursues an emotional reward from a PC or recurring character, or a **procedural** scene, in which one or more PCs (possibly aided by supporting characters) pursues an external, practical goal.
- ✦ **Situation:** a brief description of what's happening at the scene's outset. As excitingly as possible, the caller describes the scene's location, the activities of the characters involved, and the prevailing circumstances. The situation may be a simple meeting of characters to hash out an emotional conflict, or can introduce a **complication:** a new plot development affecting some or all of the main cast. Caller narration may be challenged if players object to what you describe them as doing, or if they feel that your complication assumes a plot advancement that ought to be played out instead. Other players cast in the scene may bounce off your description to describe what they're doing or other details. The scene, dramatic or procedural, then unfolds from the complication.

Often you'll find it more natural to describe these elements in another order than the one given above.

Calling Order

Before the episode's first scene, the GM picks the next precedence order.

The player choosing the episode's theme always calls first. Then comes the player who actually appeared first, in your precedence order. The GM inserts herself into the order, usually replacing the player who chose the theme.

Scenes are then called according to this altered order. Once you reach the end of a calling order, it rolls over, continuing the already established precedence order.

Challenges

Players may request adjustments to called scene parameters by announcing a challenge. How they do this depends on the element they object to.

Except where otherwise indicated, challenges resolve through a vote. With a show of hands, all players side with the caller or the challenger. The GM votes to break ties. Should the scene seem satisfyingly in keeping with the narrative to date, she votes to uphold the call. When the call seems somehow punitive, unfair, or contrary to the spirit of collective creation, she votes to uphold the challenge.

Players may see that a scene might justifiably be challenged, but elect not to do it.

Ducking a Scene

You may challenge your casting in a scene you do not want your character to take part in.

The caller may then acquiesce to your objection, and call the scene without you, or may further describe the scene so that your character's desire and poles compel your participation.

You can duck this compulsion by spending a drama token, which goes to the caller.

After you successfully duck a scene with a cast of two, leaving nothing to play, the caller starts over, calling a new scene that does not include your character.

Rushing a Scene

To insert your character into a scene the caller has not cast you in, and actively wants to keep you out of, spend a drama token or a bennie. The caller receives the token or bennie.

It costs nothing to join a scene if the caller consents to your joining.

A caller may block your unwanted entrance into a scene by spending a bennie.

You can attempt to rush a scene already in progress.

Challenging a Time Jump

Players may object to jumps in time when they preclude them from taking actions they see their characters as wanting to take in the nearer term. Resolve a challenge to a time break with a vote.

Challenging a Plot Jump

Players may object to a situation on the grounds that it advances an ongoing plot element that would be more satisfying if played out in full. Alternately, they might feel that you're cutting into the middle of a brand new situation, and that it's unbelievable that their characters would not have intervened in it sooner.

If the caller loses the challenge, she must then revise her situation description to meet the objections of the challenging player, and the voters who supported him.

Challenging For Novelty

Players may object to a situation on the grounds that it is an attempt to retry an earlier scene the caller's character lost.

If the scene seems too similar to the GM, she invites the caller to point to a change since the previous scene that puts the situation in a new light.

The best defense against this challenge is to point to an intervening scene that changed the situation. Prevailing in a dramatic scene with a third character may change the complexion of an emotional conflict enough to justify a second attempt.

If the player can't point to a changed situation, the GM resolves the challenge by requiring the caller to call an entirely different scene.

Going To Procedural

If a player describes his character successfully performing a difficult practical task, any participant, GM included, may demand that a procedural resolution instead be performed to see if they successfully do it. Unlike other challenges, it takes only one objector to trigger a procedural resolution. The narrating player may avoid the procedural resolution by either withdrawing the description entirely, or adjusting it to satisfy the objector(s).

The Right to Describe

Players with characters present in the current scene may at any point narrate details, including:

- ⤴ physical circumstances ("I look up and see vultures circling overhead.")
- ⤴ the behavior of walk-on characters ("The Tridents are getting restless.")
- ⤴ their own characters actions and what comes of them ("I pick up an axe and smash the idol.")

When someone objects to a bit of narration, they can either adjust what they're describing or let it go to challenge.

The GM also pitches in with narration, as needed.

Dramatic Scenes

In a dramatic scene, characters engage in verbal conflict over the granting or withholding of a desired emotional reward. The character seeking the reward is the **petitioner**. This role is more often than not taken by the scene's caller. The character deciding whether or not to extend it is the **granter**.

Tokens

All participants, including the GM, collect and spend drama tokens throughout the course of an episode. Everyone starts each episode with zero tokens. A central pile, or kitty, contains an inexhaustible supply of tokens. We recommend blue tokens to represent drama tokens, but any color other than red, yellow or green will do.

Drama tokens left unspent at the end of a session contribute to a player's chance of winning bennies (p. 58), then revert to the kitty. They do not carry over to the next episode.

Tokens do not represent or simulate anything in the fictional reality you're collectively depicting. Instead they bend events toward a satisfying literary rhythm, where characters sometimes prevail and are sometimes defeated in emotional confrontations. They overcome gamers' natural tendency to always dig in when challenged, forcing them to play their characters like real people, impelled by emotional need and obligation.

[[[Begin Dialogue Callout]]]

"Finally you see reason."

"You wear me down, Stonecircle."

[[[End Dialogue Callout]]]

Calling Dramatic Scenes

Call a dramatic scene by specifying:

- ⤴ the cast
- ⤴ the location
- ⤴ how much time has passed since the previous scene (if any)

The final ingredient for a dramatic scene is **intent**—what the petitioner wants, consciously or otherwise, from the granter.

If you are calling a scene in which your character acts as petitioner, as is the norm, simply go ahead and enter into the scene, without announcing your intent.

You don't have to make your character the petitioner, although it costs you a drama token if he or she isn't present at all. You can designate a recurring character, or another PC, as the petitioner. When doing this, suggest what it is that the petitioner wants. The participant playing the character may ask for an adjustment, or allow the character's intent to drift as the scene plays out and the granter responds.

Never call a dramatic scene between two recurring characters. No one wants to listen to the GM talk to herself, especially not the GM.

When the GM calls a dramatic scene, she may cast any participants in the scene, provided at least one of them is a player character. The GM chooses the petitioner and granter as her conception of the scene demands.

Playing and Resolving Dramatic Scenes

Players portray their characters through dialogue until the petition is either granted, or it becomes apparent that it has been conclusively rebuffed, or is losing tension and energy. This occurs when the players in the scene start to repeat themselves, or players not taking part in the scene grow visibly bored or restless. Where necessary, the GM steps in to declare the scene concluded, by asking the petitioner if she thinks she got a significant concession.

If the answer is yes, the petition is considered granted, even if other players feel that the petitioner didn't get everything he or she wanted. Neither the caller or the other players in general may gainsay the petitioner's player on this point.

If the answer is no, and the rest of the group agrees with the petitioner's assessment, the petition is considered to have been refused.

If the answer is no, but other participants feel that a significant shift in emotional power from granter to petitioner occurred, the group, including GM, votes. The scene's caller gets an extra tie-breaking vote, where necessary.

Gaining Tokens

Any dramatic scene ends with an exchange of one or more drama tokens.

If the petition is willingly granted by the participant, the granter earns a drama token--from the petitioner if he has one, or from the kitty if not.

If the granter refuses, the petitioner gains the token—from the granter if she has one, or from the kitty if not.

Forcing

If the player (or GM) playing the granter chooses not to relent, the petitioner may, by spending two drama tokens, **force** the granter to grant a significant emotional concession. This may still withhold some part of what the petitioner seeks, especially on the practical level, but must nonetheless represent a meaningful shift of emotional power from the granter to the petitioner.

At the end of the scene, the forced granter receives the two drama tokens from the petitioner, *provided the force actually takes place*.

The granter's player may block a force by spending three drama tokens. These are paid to the petitioner, at the end of the scene. The petitioner does not spend the 2 tokens that would have been spent on the force, for a net gain of 3.

After a force occurs or is canceled, the same characters may not, for the duration of the episode, be called into similar scenes intended to reverse the original result. Some significant new element, as judged by challenge voting if need be, must be added to make the scene a true new development, and not just another kick at the can.

Supporting or Blocking a Force

Players not directly involved in a scene may support an attempt to force, or cancel a force, by giving their drama tokens to the current petitioner or granter—provided their character is present in the scene. They describe what they say or do to make the force more or less likely.

If you support a force which the granter then blocks, you get your tokens back.

[[[Begin Curtain Sidebar]]]

Concessions and Emotional Power

A grant needn't give the petitioner everything he wanted in exactly the terms he wanted. Any major shift in emotional power from granter to petitioner counts as a grant. Sometimes you'll reach clear consensus on what constitutes a major shift; in a few cases you'll have to vote.

Even a force must respect the bounds of the granter's established character. You can't, and shouldn't expect to, turn an avowed enemy into a loyal friend in a single scene. Forced petitions represent the character giving in for the moment, not undergoing a life-changing epiphany. They certainly don't play like hypnosis or mind control. A force causes the subject to grudgingly act in a friendly, or friendlier than usual, manner in this particular instance.

No Contest Scenes

When you act as granter, you may find, as a scene plays out, that your character has no reason to oppose a petitioner's request. If so, you can declare this a no-contest scene, bringing it to a quick conclusion. The caller may then call a new scene—hopefully one in which real conflict does occur. If at a loss for a replacement scene, the caller may choose to pass to the next caller in the established precedence order.

Two-Way Exchanges

At the end of a dramatic scene, the GM and participants might conclude that it was a two-way exchange, in which each character sought an emotional payoff, which either was or wasn't granted.

If both participants were a) denied or b) got the payoffs they sought, each receives a drama token. If both players have a drama token already, this cancels out—you needn't actually trade tokens. If one or more have zero drama tokens, however, the missing token(s) come from the kitty.

If one petition was granted and the other denied, the denying player pays the granting player two tokens. If the denier has less than 2 tokens, the deficit is made up from the kitty.

Two-way exchanges may prove particularly common in scenes started with a soft open.

Multiple Petitioners

Sometimes more than two characters will take part in one dramatic exchange—or several dramatic exchanges will overlap and interweave with one another. This might happen when:

- ✧ a player jumps into a dramatic scene
- ✧ a dramatic scene arises organically from a conference scene

Where possible, the GM avoids having recurring characters take major roles in these multi-layered dramatic scenes. Ideally, they act only in a supporting capacity, answering questions or offering opinions without seeking emotional rewards of their own. Sometimes the story demands that they take part as granters. The GM can almost always ensure that they don't act as petitioners.

After the various discussions come to a head and appear to resolve themselves, ask whether this was a dramatic scene at all. Do one or more players feel that their characters sought an emotional payoff?

- ✧ If not, it was an expository scene setting up future events, probably of a procedural nature. No drama tokens are exchanged. Call the next scene.
- ✧ If only one player answers in the affirmative, this is an ordinary drama scene with onlookers. Determine the distribution of tokens as usual. *This is the most common case: even in a group scene, one character's petition usually dominates, to a degree that all participants instinctively acknowledge.*
- ✧ If multiple players feel they sought emotional reward, the group, led by the GM, continue as follows.

The GM quizzes each participating player, in a newly drawn precedence order, asking:

- ✧ what they most wanted, emotionally, in the scene
- ✧ who they wanted it from
- ✧ and whether they got it

If they got what they wanted, the specified player granted their petition and earns a drama token—from the petitioning player if he or she has one, or from the kitty if not.

If they didn't get what they wanted, the specified player refused their petition. The petitioner earns a drama token—from the refuser of the grant if he or she has one, or from the kitty if not.

A group scene might easily come to one overall conclusion about a practical course of action, with various different emotional ramifications for the those taking part.

Petitioning For Practical Favors

Any scene involving a main cast member or recurring character is by definition dramatic. Even if the granter seems to be asking for a practical favor, the subtext of the scene is always emotional. Depending on how self-aware the characters are, they may or may not realize this, but it's true all the same.

The scene counts as a grant if the promise to perform the favor feels like a significant concession to either the petitioner, or to the group at large. Whether the favor is later performed to the petitioner's satisfaction does not retroactively alter the outcome of the scene—but probably provokes a new scene in which the disappointed petitioner returns to the granter to express a grievance.

Drama with Recurring Characters

The GM plays all recurring characters drawing on a single pool of drama tokens. Like any player, the GM must earn drama points by granting or by losing petitions.

Soft Opens

You can start a scene without specifying a situation. Instead the characters cast in the scene simply start talking to one another, and the scene works organically toward a dramatic conflict. This is called a **soft open**.

Conference Scenes

On occasion you'll want to call a particular type of soft open, the conference scene, in which all or most of the main characters discuss the issues currently before them. This might or might not resolve into a dramatic scene. It may instead simply work as an establishing scene, setting up subsequent dramatic and/or procedural scenes.

Montage Scene

A montage scene is a special kind of scene that may be slotted in between regular scenes. It is called as a scene by a player when it is their turn and they suggest a duration. If no one objects it plays out. During a montage any and all players may call actions for their character that can be played out without significant dialogue including:

- Preparing for a future scene
- Researching
- Training
- Shopping
- Travelling

Montage scenes should include little dialogue and very few procedural roles.

At the end of a montage scene the calling player may immediately call another scene so long as they don't call another montage.

Healing Scene

This scene serves a specific purpose - an injured character is visited on their sick bed or death bed. It can be used to show how the character is (or isn't) recuperating gracefully.

Training Scene

A character training during a montage scene shows their character's intention to develop a new skill or work on an existing skill. It may be that its simply a montage set to a piece of dramatic music. It may be a dramatic scene during which dialogue takes place while two or more characters train together.

Shopping Scenes

This scene serves the purpose of a character obtaining equipment - this might be by shopping, stealing fetching or making equipment. When called the GM may require characters to go through the motions of obtaining the equipment or may simply rule they did so off stage. If ruled to be off stage the calling player may then call another scene immediately.

Researching

A research scene can cover a wide variety of activities including collecting evidence at a crime scene, trawling local bars to get the word on the street, searching through a library or creating something in a workshop.

It may become a procedural scene or a dramatic scene.

Healing

Whenever time moves forward in a dramatic scenes through a time jump that moves things on to another day the GM should note this and at a moment that won't interfere with dramatic play apply the healing rules. This may be:

- At the start of a Procedural Scene
- At the end of a Dramatic Scene
- At the point where a Dramatic Scene switches to being a Procedural Scene

Hit points are regained each day, with the points regained based on the activity undertaken that day. See the Long-Term Healing table, below, to see how many hit points you recover each day.

Table 1 Long-Term Healing Table

Activity	Mobile	Bed-Ridden	Critical
Active	0*	—	—
Rest	1	1 per 2 days*	0*
Medical Care	2	1	1 per 2 days

*May lose hit points, at the GM's option.

Active means exerting oneself normally.

Rest means taking it easy and sleeping a lot.

Medical care means being under the care of competent physicians.

Mobile means you have 1+ hit points (and can move around).

Bed-Ridden means you have 0 or fewer hit points.

Critical means you are severely wounded (GM's option).

Procedural Scenes

In procedural scenes, characters pursue practical, external goals. These may allow them to petition for emotional rewards in subsequent scenes, but at the moment of success or failure are matters of practical effort.

Drama vs. Talking

Where any scene between a PC and either another PC or a recurring character is by definition dramatic, with emotional stakes at play, all dialogue interactions with minor characters are procedural, and resolved with the Talking ability. They can never grant meaningful dramatic concessions, because the PCs have no emotional investment in them. They can only grant—or refuse—practical favors. Drama tokens are never awarded or spent as the result of a Talking scene.

Calling a Procedural Scene

To establish a procedural scene, the caller describes the basic situation. While adding as much evocative narration as possible, she specifies:

- ✦ The scene's location
- ✦ Which characters are present
- ✦ What they're trying to achieve, and how

To call a procedural scene your character is not in, spend a drama token. (This requirement does not apply to the GM.)

Narrating the Ups and Downs

While performing the rules actions described above, the GM and the players describe the smaller advances and setbacks the participants undergo on their way to victory or defeat.

Success By Narration

Often you can describe your characters, in concert with others or alone, as undertaking successful practical action, without submitting yourself to the vagaries of procedural resolution. You can do this at the top of a scene, while setting the scene, or as it unfolds. You needn't be the caller to describe your character's practical successes.

If no participant objects to your narration, what you describe becomes part of the narrative.

If any participant objects, you must play out a procedural to see if your pursuit of a practical goal succeeds. You aren't obligated to start a procedural when an objection is raised. Instead you can delay the attempt, or give up on it entirely. In the second case, your character probably sees that the action is more difficult than it at first

appeared. In the first, you'll likely go on to bring other players in on your action—which is the best assurance of success under the simple procedural system.

When you call a procedural scene, and the GM doesn't see any good story reason for you to face resistance, she'll ask if anyone else objects to your success. If not, you describe your action as having succeeded, and then call a reframed scene arising from that.

Resolving Consequences

When a character earns or suffers a consequence during a procedural scene, GM and player each make a note of it. Consequences are typically too ephemeral to include on the character sheet.

Players should then attempt to work their consequences into an upcoming scene. If they don't, the GM will. You can invoke a consequence in more than one scene. Eventually some new consequence will arise, and the old one will fade into the background.

For more on consequences see later.

Mechanics

When you use a trait, you roll a number of dice equal to its score (usually three dice, or four dice for your superior trait).

If you get a bonus die (by having some advantage), you roll an extra die along with your normal dice and then drop the lowest die out of the bunch. If you have to roll a penalty die (from having some disadvantage), roll an extra die along with your normal ones, but drop out the highest one.

You compare your roll vs. that made by the GM, usually representing a GMC's traits. You succeed if you beat the GM's roll or the difficulty factor she assigns.

Sample Difficulty Factors

Task or

Task	Difficulty Factor	Dice to Roll
Easy	4	1
Moderate	7	2
Hard	11	3
Really Difficult	14	4
Near Impossible	18+	5 or 6

Your Experience Pool

You can use the die in your experience pool to improve one roll per game session. Once you use the experience die, you cannot use it again

in that session. The dice from your experience pool act as a bonus dice. As you play, you can acquire more dice for your pool.

Basic Mechanics

These are the rules for play, how to tell if you succeed or fail at the various tasks and efforts you attempt. The special case of combat is covered in the next section.

General Actions

Whenever your character tries to do something, the GM will respond in one of three ways, depending on the difficulty of the task. The task might be **automatic** (no roll required), **chancy**, or **impossible** (no roll allowed), as ruled by the GM.

Chancy Actions

Roll some dice, add the numbers up, and the better you roll, the better the result. Specifically, your total is compared to some other number.

Three results are possible.

- 1) *Your total beats the number.* You succeed at what you were attempting. The greater the difference between your roll and the number, the greater the success, as ruled by the GM.
- 2) *Your total equals the number.* Draw, stalemate, or inconclusive results are thus indicated.
- 3) *Your total is less than the number.* You fail, and the greater the difference between the numbers, the more severe your failure, as ruled by the GM.

How Many Dice Do You Roll?

Generally, you roll two, three, or four dice, depending on the action and your traits. If you are trying something that directly involves one of your traits, roll the number of dice equal to your score in that trait. If the action has nothing to do with any of your traits, you roll two dice.

That means that the average person attempting the average task rolls two dice.

For example, a character is trying to look cool. He is good at manipulating people (score of 3), so the GM tells him to roll three dice. The higher the number, the cooler he appears. A normal person would only get to roll two dice, and a nerd would roll two dice but suffer a penalty die (see below). If he had chosen to have “manipulating people” as his “superior” trait, he would have gotten to roll four dice.

If you try something at which you have some kind of edge or advantage, you get a **bonus die**. (These bonus dice are awarded by the GM in the situation; they do not come from your experience pool.) Roll it right along with your normal dice, but drop out the lowest die you roll.

Your total is still composed of the same number of dice as normal, but they're likely to be higher rolling dice. That's how your advantage translates into game mechanics.

If you try something at which you have some special difficulty or hindrance, roll a **penalty die** along with your regular dice. Now drop out the highest rolling die and use the total of the remaining dice as your roll.

If you get a bonus and a penalty die for the same roll, they cancel each other, and you roll normally. You can use an experience die to cancel a penalty die, but then you cannot use the die again for the rest of the gaming session.

The GM assigns bonus dice and penalty dice depending on her judgment of the situation. You can ask for a bonus die when you think you deserve one.

For example, if a character, before trying to impress this good-looking woman, had successfully watched her for a few hours, he would get a bonus die on his roll (roll four dice and take the best three). On the other hand, if, unknown to him, he had a splotch of ketchup on his tie, he would have to roll a penalty die (four dice, take the worst three). If he had done his research and had ketchup on his tie, he would get neither bonus nor penalty, as they balance each other out.

Comparing Your Roll

There are two ways to determine what number to compare to your die roll.

When you are working against an inert force, the GM assigns a **difficulty factor**. That's the number to which you compare your roll, and the more difficult the task, the higher the difficulty factor. Alternately, the GM can roll dice for the strength of the inert force, introducing more chance into the equation. The harder the task, the more dice the GM rolls. An easy task would get one die, a moderate task (for the average person) would get two dice, a hard task would get three dice, a really difficult task would get four dice, and a nearly impossible task might get five or six dice.

When working against an active opponent, **the opponent rolls a number of dice**, just like you do, depending on the opponent's traits and bonus or penalty dice, if any. You and the opponent compare your rolls, with the specific results determined by the GM. Generally, the higher roll wins.

For example, that character is trying to impress the woman he's met at a bar. She notices this, and in turn tries to impress him and gain the upper hand. She has three dice, as well. If the character has been watching her carefully, he'll get a bonus die (and thus an advantage). If he has ketchup on his tie, he'll get a penalty die (a disadvantage). The player and the GM (running the woman) each roll their dice, and the GM interprets the results depending on who beat whom.

Note that the GM need not tell you what she rolls for a GMC, or even how many dice she is rolling. The GM only needs to tell you the results of your action as your character perceives them.

A Special Case: Technical Traits

With technical skills (such as “acupuncture”), even a score of 1 die indicates the character can do things that the average person would have practically no chance to do. (The average person has a score of 0 in acupuncture.) A 1 die acupuncturist might not be very skilled or experienced, but he is still able to do things that even a score of 3 or 4 in another skill would not permit. Assume that someone with such a skill can automatically perform any related action that an unskilled person could do but would have to roll for, as well as most normal functions related to that skill. Generally, a character only rolls for a technical trait in some unusual situation, such as diagnosing an unusual disease or piloting a helicopter through a storm.

In GMC descriptions, technical or fringe traits, where the average person would have no dice in the trait, are indicated with an asterisk (e.g., “*Neurosurgery*, 1* die”).

The Rule of Common Sense

Sometimes the dice will dictate an event that runs counter to common sense, something that would strain the players’ willing suspension of disbelief. There are two possibilities when this happens.

First, remember that strange things happen all the time in-game. Go with the result, no matter how bizarre. Maybe the GM will invent a justification for it, maybe not.

Second, don’t bother to roll the dice in the first place, if common sense makes clear what’s going to happen. The dice are a way to answer the question “What happens?” Don’t ask questions that you already know the answer to.

The GM has quite a job determining just what is “common sense.” Make the job easy for her and don’t argue when she makes a ruling.

The Hand of Fate

Sometimes a chancy situation develops in which no trait truly applies, but the outcome is uncertain. In this case, roll two dice. A high roll means a result good for the players, a roll around 7 means a mediocre or average result, and a lower roll means a bad or dangerous result.

For example, a character is taking his date out on a picnic, and the weather has not yet been determined. The GM lets him roll the dice, and he gets a 5. The GM rules that the 5 means an annoying wind that keeps blowing the picnickers’ napkins away, but nothing serious.

Multiple Actions

You may attempt more than one action in a round, but by doing so you take a penalty on each action. If you attempt one extra action, you suffer a penalty die on all actions (including defense rolls). If you attempt two extra actions, you roll one fewer die on all actions undertaken in that round. Three extra actions means two fewer dice than normal, four extra actions means three fewer dice, and so on.

Tangential Traits

Sometimes you have a trait that does not exactly apply to the task at hand. In this case, the GM may allow a bonus die (if the trait is 3 dice) or an extra die (if the trait is 4 dice or better).

For example, consider a model with 3 dice in the trait “model.” This central trait covers good looks, use of make-up, and possibly bad acting.

If she tries to use make-up to alter her own appearance give her two dice plus a bonus die; that’s better than average but not as good as someone with the trait “disguise.”

Group Efforts

When working together, PCs can improve (or sometimes decrease) their chances of success. Depending on how well a given task can be accomplished by more than one person, the GM can call for one of the following resolution systems.

Simple Addition

In tasks that two people can easily do simultaneously without getting in each others’ way, add the dice of both characters together.

For example, two characters are trying to lift a stone that’s covering a chute to some underground passage. The GM decides that a roll of 13 is necessary to move it. (That means an average person wouldn’t have a chance of moving it alone.) They each get two dice for brute strength, and they roll a 4 and a 10, for a total of 14. They move the stone and descend into the darkness.

Combining Dice

In tasks where two can work together effectively, but not perfectly, roll all the dice and take the highest, a number of dice equal to the number normally rolled by the best of the cooperating characters. (Effectively, the dice rolled by lesser characters become bonus dice for the best.)

For example, two characters find a cache of ancient texts, partially translated into barely coherent English. Under time pressure, they rush through the texts looking for something useful. He rolls four dice, she rolls two, and they take the best four dice between them to see how much information they can glean quickly.

Their escape is cut short, however, when a gang of roughs surrounds them. The first character is up against five of them, who roll two dice in combat. The GM rules that they don’t fight in a coordinated pattern, and that not all five can get to the character at once, so they only get “combining dice.” He rolls three dice for 14, while the gang members roll ten dice and take the best two, a 5 and a 6. The character manages to beat off the gang members, but (because of the unstoppable six), he suffers a nasty kick in the groin while doing so (5 hit points damage).

Note: This fight was an example of “gestalt” combat.

Either/Or

Sometimes characters split up a task so that only one of them (determined randomly) has a chance for success. In this case, all the PCs might roll, but only the one with a real chance for success counts.

For example, two characters decide to search the bodies of their fallen enemies for anything of interest. Each PC searches half of the bodies, so only one will even have a chance to find the note hidden in one's pocket. The GM rolls and determines that the second character is searching the relevant body. Being perceptive, she rolls three dice plus a penalty die for the darkness of the chamber; she gets an 8, good enough. Meanwhile, the first character rolls a 4, and the GM tells him he found nothing. He doesn't know that there wasn't anything for him to find, anyway.

Now if these two PCs weren't running for their lives, they might have gone over each of the bodies together (using combining dice). As it was, they sacrificed thoroughness to save time and are once again fleeing for an exit from the cavern.

Worst Roller

When two or more characters attempt something that should really be left to one of them, they all roll, and the worst roll is used to determine the result.

For example, two characters have finally found an exit to the caverns they're searching, a tunnel that opens onto the private grounds of a wealthy businessman. While looking for a way out, they are discovered by a security team armed with tasers. Immediately the first character pretends to be happy to see them and launches into a tale about how they're lost. Hoping to help, the second character speaks up and adds some details. The GM tells each player to roll for the effectiveness of their stories, three dice for the first character (who is good at manipulating people) and two dice for the second. The first character, with his roll of 9, beats the guards' roll of 7, but the second character rolls only a 6, and the guards become suspicious. Rather than take chances, the guards taser the two of them and drag them off to an interrogation room.

If they had taken time to invent and rehearse a story, they would have been able to use combining dice (best three out of their five dice), but since they didn't coordinate their subterfuge, the guards had a much easier time seeing through their ruse.

Personal Consequences

Breaks

When you roll 2 or more 6's or 2 or more 1's for a given action, you've had a break. Keep a record that you've had a good break for 2 or more 6's or a bad break for 2 or more 1's.

Resulting Personal Consequences

Players who had breaks may take on a personal consequence which matters in a future scene.

At the end of a procedural scene where you have a good break roll 1d6 if you had a good break - on a 6 you have a good consequence. If you have a good consequence introduce an advantage your character can benefit from in an upcoming scene.

At the end of a procedural scene where you have a bad break roll 1d6 if you had a good break - on a 1 you have a bad consequence. If you had a bad consequence, introduce an additional obstacle your character must resolve in an upcoming scene.

It is possible to have both a good and a bad consequence from the same procedural scene.

Combat

Two systems for Combat are available - fast played narrative Gestalt Combat and Detailed Combat.

Gestalt Combat

In the gestalt system, you make one roll to determine the general outcome of the fight. The players total all their rolls, and the GM totals all the GMCs' combat rolls. (The GM determines what rolls are made and how, depending on the circumstances of the fight.) Whichever side rolls highest wins the fight, but the GM keeps the GMCs' total a secret, so the players don't know who will win. Then the players and GM talk through the fight, with the GM adjudicating the actions based on the rolls already made. The GM can go into any level of detail desired, including dishing out damage to individual PCs that rolled poorly, or even altering the result of a close fight if the players use effective tactics.

The GM can even simply declare the results of the fight with no play-by-play descriptions if she wants to keep things moving at a rapid pace. As a GM, use gestalt combat whenever the detail of detailed combat seems pointless.

Detailed Combat

The rules above rely a lot on common sense, the GMs ability to adjudicate ambiguous results, and your good natured acceptance of the GMs rulings. In combat, when things happen fast and your life is on the line, you probably need more specific rules. Here they are.

Rounds

Each round is long enough for each character to do one thing. That way everyone stays involved all the time. Generally, a round equals 3 seconds of action in the game world.

The GM calls on each player in turn, depending on their **initiative** rolls. When you are called, you get to do one thing that you could do in a few seconds, such as try to hurt somebody, run away, use a fringe power, scream for help, try desperately to patch a bleeding wound, find that necessary implement in your backpack, or whatever. If you try to do too much, the GM will only let you perform part of the intended action.

The most common thing my players do is try to take a piece out of their opponents, rules for which are below.

How Long is a Round?

If a combat represents a lightning fast exchange of blows between kung fu masters, each round might be a second, or even less. If the combat is a duel between two sophisticates who like to insult their opponents and hold a nasty dialogue while pounding on each other, then a round might be ten seconds or more. Unless the GM rules otherwise, assume a round is about three seconds long.

Movement in Combat

Sometimes you will want to know just how long it takes to get from one place to another. Assuming a 3 second round, you can move at the following speeds:

Speed	m/round	Km/h
Walking	2.5	3
Hurrying	5	6
Jogging	7.5	9
Running, steady	10	12
Running, fast	15	18
Sprinting	20	24

For reference, remember that a “4 minute mile” means running at about 24 km/h for four minutes. Not many people can do it, though some can run that fast or faster for much shorter periods of time. Also remember that characters usually do not have light clothes, running shoes, a generous warm-up, and a clear track on which to run. That 24 km/h figure is impossible for most PCs in most situations.

Initiative

When the fight starts, each player rolls for **initiative**. Use whatever traits are appropriate. For example, traits such as “agile,” “good reflexes,” and “martial artist” count. Lacking any such trait, a character rolls 2 dice. The GM can roll for all the GMCs with one roll for simplicity’s sake. The GM or a helpful player writes down the characters from highest roll to lowest. This is the order in which they will act each round.

Or have each of the players act in the order they are seated around the table, with the GM acting first or last.

You may also wait to act until later in the round, in which case you just interrupt when you want to take your turn. (By waiting, you can coordinate a simultaneous action with another character.)

Attacks

When it is your turn to attack, roll your relevant attack trait, such as “Strong,” “Martial Artist,” or “Good with a Baseball Bat.” If you get a penalty die or bonus die, add it in.

The target of your attack makes a defense roll, using traits such as “Fast on My Feet,” “Good Brawler,” or “Slippery as an Eel.”

Note: A non-combat trait cannot be used for both attack and defense in a single round. If you are “Agile,” you must decide each round whether to use that trait for your attack or defense roll. A specifically combat oriented trait, such as “Good Knife- Fighter” can be used for both attack and defense rolls. This rule preserves game balance. Since a trait like “agile” has non-combat applications that “good knife fighter” does not have, it wouldn’t be fair to allow such a broad trait to equal a strictly combat-oriented trait in a fight.

On the other hand, someone who is “Strong as an Ox” and has “Good Reflexes” to boot could use “Strong as an Ox” for the attack roll and “Good Reflexes” for the defense roll.

So you’ve rolled your attack roll and the other guy has rolled defense. Compare the numbers. If your attack roll is less than or equal to the defense roll, you have failed to connect for significant damage. If your attack roll is higher than the target’s defense roll, you’ve scored a hit and will do damage. Subtract the defender’s (lower) roll from your (higher) roll. Multiply this result by the damage factor for the weapon you are using, and the total is the damage you have just dished out (more tasty details below).

Bear in mind that making an attack roll does not represent a single swing or lunge; it represents three seconds of trying to get the other guy. A high roll might mean that you have pounded your opponent in the head several times, not just once.

Ranged Attacks

For **missile weapons** like guns and crossbows, the system is a little different because it is harder to hit someone at a distance with a single shot than it is to stab somebody next to you during three seconds of your best effort. With missile weapons, the target receives a defense roll based on such factors as range, movement, cover, and so on. The GM assigns the defense roll, based on the factors in the “Ranged Attacks” table.

The distance terms are highly subjective as they depend on the type of weapon being used. The Weapon Ranges chart lists the range in meters at which the target receives various defense dice, based on the type of

weapon used. If the distance in meters exceeds the number listed, use the next higher number of dice. For example, if someone opens up with a sub-machine gun while you are 30m away, you will get 3 defense dice for range, in addition to dice for dodging, moving, cover, and so on.

Table 2 Ranged Attacks Table

	Defense Dice
Distance	
Point Blank	1
Short Range	2
Medium	3
Long Range	4
Very Long Range	5
Cover	1 or 2
Target Moving	1
Attacker Moving	1
Target Dodging	bonus*
Darkness, fog, etc.	1 or 2

*Defender gets bonus dice equal to the number of dice normally rolled for “agility,” “quick reflexes,” etc. (The default is 2 dice.) Someone with “fast, 4 dice,” for example, would receive 4 bonus dice on the defense roll. A clumsy character receives only one bonus die for dodging.

The target rolls the number of dice indicated from among the above factors as his defense roll.

Table 3 Weapon Ranges

Weapon	Distance	Point Blank	Short Range	Medium	Long Range	Very Long Range
	Dice for Defense Roll	1	2	3	4	5
Thrown, balanced*		2m	4m	8m	16m	32m
Thrown, awkward**		2m	4m	6m	8m	10m
Crossbow		2m	10m	20m	40m	80m
Taser		1m	2m	5m	†	†
Pistol		2 m	10 m	20 m	40 m	80 m
SMG		2 m	25 m	50 m	100 m	200 m
Rifle		2 m	50 m	100 m	200 m	400 m
Shotgun		4 m	8 m	16 m	32 m	64 m

*Such as a ball or throwing knife.

**Such as a sword or blender.

†Their electric cords don’t extend past 5m.

To find the “distance dice,” find the number that is equal to or higher than the distance to the target. Now find the number at the top of that column, that’s the number of “distance dice” rolled for defense. For example, if

you throw a baseball (“thrown, balanced”) at someone 6m away, the target gets 3 dice for the defense roll (plus other modifiers besides distance).

If the GM wishes, she can use “half-dice” when characters do not deserve full dice under the rules above. For instance, someone under very light cover might just get a bonus die instead of an extra die on defense, or someone standing 5m from a knife-thrower might get 2 dice plus a bonus die for range, rather than jumping straight from 2 dice to 3 because of the difference between 4m and 5m.

Some weapons may, at the GM’s option, have ranges different from their general types, based on design. After all, some weapons are just better than others.

Predictable Attacks

If you ever make a predictable or boring attack on an opponent, the GM has the right to give you a penalty die on the attack. Here are some examples:

Penalty die: “I swing at it.”

No penalty die: “I pull back for an allout blow at that thing’s lower face.”

Penalty die: “I try to hit it in the gut again.” (After trying the same thing the round before.)

No penalty die: “Well, it’s gut is pretty well protected; I’ll drop to the ground and sweep its feet out from under it.”

There are two reasons for this rule. First, if you try the same attack repeatedly or attack without planning (as evinced by phrases like “I swing”), then your opponents are going to have an easy time defending themselves. Second, “I swing” is boring.

The “predictable attacks” rule does not apply to GMCs.

How Much Damage?

If you’ve scored a hit, now you take the difference between your roll and the defender’s, multiply it by a damage factor (see below), and the result is the number of points done in damage. Certain types of armor subtract a certain number from each attack that does damage. Only the points in excess of the armor’s rating can do damage. These points are deducted from the target’s hit points.

Table 4 Damage Factor

	Damage Factor
Unarmed combat	X1
Knife, lead pipe	X2
Sword, axe	X3
Throwing knife, slingshot	X1
Crossbow, throwing axe	X2
Taser	X5
Light Handgun	X3
Light SMG	X3
Medium Handgun	X4
Medium SMG	X4
Large handgun	X5
Large SMG	X5
Light Rifle	X6
Heavy Rifle	X7
12ga Shotgun**	X10**

* All damage from a taser is temporary. Record it separately; it all comes back when the character recovers.

**Divided by “distance dice” from the Firearm Ranges table above.

Firearms and Tasers

Gunfire Options

Firearms of various types allow different firing tactics.

Revolvers

You can get one good shot per round with a revolver.

Automatic Pistols

You can get up to two shots per round, but the second receives a penalty die due to recoil from the first.

Sub-Machine Guns

Each round you can fire two single shots, one three-round burst, or one full auto shot (see below). If firing two single shots, you take a penalty die on the second due to recoil.

Rifles

You can fire one shot per round.

Automatic Rifles

You can fire up to two shots per round, one three round burst per round, or fire at full auto (see below). If you fire two single shots, you take a penalty die on the second.

Three Round Burst

A burst sends more bullets at the target, increasing the chance to hit, but the recoil on the second and third bullets makes them less accurate than the first. The farther the target is from the characters, the more detrimental this recoil is to the accuracy of the second and third bullets. A burst adds a bonus die to the roll to hit regardless of range. At point-blank or close range, it also adds +1 to the weapon's damage multiplier, but not at medium, long, or very long range. These modifiers represent the increased likelihood to score a hit as well as the probability that the victim will be hit by more than one bullet. If the resulting damage is low, assume that only one bullet hit. If the damage is very high, assume all three hit. If medium, assume two of the three have connected.

Full Auto, One Target

Full auto puts a lot of bullets in the air, but the massive recoil makes the extra bullets considerably less effective in hitting a single target.

After the first few shots, the recoil is so great that the extra bullets have relatively little effect. Most of them go astray. Still, it is a little better than the burst. Full auto is most useful for pinning down the enemy or messing up a large number of targets. It is also the most effective method known for wasting huge amounts of ammunition. At point blank or close range, full auto trained on a single target provides a bonus die to hit and +2 to the damage multiplier. At medium range, take a bonus die and add +1 to the damage multiplier. At long or very long range take a bonus die, but there is no addition to the multiplier. You must have at least 10 rounds in your clip to qualify as "full auto."

Full Auto, Spread

You can target one person for every five bullets fired. You cannot skip a target between two people who you do target. For instance, if your friend is between two enemies that you fire on, you must target the friend as well. At point blank range you receive a bonus die on each attack and +1 to the damage multiplier. At close range you receive a bonus die on the attack but no modifier on the damage factor. At medium range, you receive no bonus, other than the ability to target several opponents at once. At long range, you receive a penalty die against every target.

At very long range, you receive two penalty dice against every target. Full auto does a lot of collateral damage as stray bullets hit the area around the targets.

Shotguns

One shot per round. Divide damage by the number of defense dice rolled for distance. For example, at 10m the defender gets 3 dice for distance, so you divide your damage by 3.

Tasers

Tasers are popular among private security forces. Tasers hit you with a massive amount of voltage, probably enough to knock you down and keep you down for a while, but they do no permanent physical damage (unless you have a weak heart...). They have a damage factor of X5.

Versus armor, tasers are an exception to the general rule because the damage comes from electric shock rather than kinetic energy or penetration. Roll the dice for armor as if for a normal (non-bullet) attack. If the dice match or exceed the number by which the attack roll exceeded the defense roll, the armor has prevented

the taser from penetrating, and you take no damage. If the roll is less than the number by which the attack roll exceeds the defense roll, the taser does full damage. In other words, either the armor stops the taser or it doesn't; there is no middle ground.

Table 5 Gunfire Tactics Summary

Tactic	Range				
	Point Blank	Close	Medium	Long	Very Long
3 round burst	b/+1	b/+1	b	b	b
full auto, 1 target	b/+2	b/+2	b/+1	b	b
full auto, spread*	b/+1	b	—	p	2p

* Target one character per 5 bullets fired.

b: bonus die on attack roll

p: penalty die on attack

2p: two penalty dice on attack

+1: +1 to damage multiplier

+2: +2 to damage multiplier

Ammunition

In addition to standard rounds, most firearms can take specialized ammunition.

Armor-Piercing Rounds

Armor-piercing rounds do half normal damage, but armor is much less effective versus an armor-piercing round. Subtract the rating of the armor from damage, whether the armor is bullet-proof or normal. For example, a bullet-proof suit would provide 2 points of protection, while a military armor would provide 5 points of protection, 3 for its regular armor component and 2 for its bullet-proof component. This reduction in armor protection comes off the damage before it is divided by 2.

Hollow Point Rounds, Safety Slugs

Hollow point rounds sacrifice penetrating power for extra damage and safety. (They will not pass through the body, allowing one to strike an enemy with less chance of the bullet traveling through the body and striking someone else, perhaps after ricocheting off a bone or two.) The damage factor for a hollow point or similar bullet is +2 more than normal, but armor of all kinds has twice its normal effect.

Damage Effects

Messed Up

If the target is now at half or less their normal hit points, they suffer a penalty die on all actions until they recover to more than half their normal hit points. The GM may assign more specific debilities for characters that have received specific wounds, such as decreased mobility from a knee shot, decreased vision from a blow to the eye, and so on.

Down for the Count

If the target is at 0 hit points or below, they are out of the fight. “Out of the fight” can mean a lot of things, depending on the type of weaponry used and the number of points below 0 that the target is at.

When you have taken enough damage to be out of the fight, but not enough to kill you outright, you may find yourself in any of various states of disrepair.

Someone dropped to 0 by fists and kicks is likely hurt, unable to fight, demoralized, in great pain, and probably suffering some broken bones.

The situation, however, is rarely lethal, and most vital organs are well-protected by a body structure carefully shaped by millions of years of evolution. Such an injured character should be able to return to impaired function with time or the help of friends and eventually recover completely.

Someone at 0 or below from application of clubs, cudgels, monkey wrenches and the like may well have badly broken bones and internal bleeding, but they’re likely to be in stable condition. They might be able to resume mobility after a while even if left on their own, though they might have a concussion.

Knives and other sharp, pointy things are likely to leave you incapacitated and bleeding. Untended, you could easily bleed to death (especially from a slashing weapon) or die from internal injuries (especially from a puncturing weapon).

Guns and similar are likely to leave you in shock, dying, bleeding, helpless, and hopeless. Emergency medical attention may well be required to save you.

Character Death

As a rule of thumb, a character dies when he has taken twice as many points of damage as he has hit points. If you have 21 hit points and drop to -21 through wounds, you are either dead or checking out. In order to survive, you need medical attention and a reason to live.

At that point, you face the decision of recovering or letting go. Attempting to recover means piecing your broken body back together, suffering prolonged pain, possibly facing permanent injury, and perhaps dying anyway after undergoing all that tribulation. Letting go is often the easier option, letting yourself slip into the great white light, where the damage inflicted on your body will not be an issue at all. At the point of death, you can only direct your will to recover if you have a good reason to live. Tell your reason to live to the GM; if she agrees it is sufficient, you live. Otherwise, you slip off into the great beyond. (Of course, the GM may wish to make a roll or two when deciding whether you live.)

A player whose character dies may spend a Drama Token to:

- Call an immediate scene where their character shares a few last words
- Have the character vanish possibly to return later either as a recurring character or as their PC
- Perform one last act of heroic sacrifice

Armor

Armor comes in two types: regular armor and bullet-proof armor.

Regular Armor

The rating for regular armor represents the number of dice rolled and deducted from each attack.

Very light armor (generally leather clothes and the like) has a rating of “1 pt.” It stops only one point of damage versus normal attacks.

Heavy armor can slow you down, causing you to take a penalty roll on every action that requires agility (including attack and defense rolls). Note that encumbrance from armor does not affect firearm attack rolls.

The protection offered by armor is cumulative, but “stacking” armor causes a penalty die for each extra layer of armor worn. For example, someone wearing thick leathers under their plate mail would roll 2 dice and add 1 point for protection, but they would also suffer two penalty dice on agility-related actions (one for the plate mail, the other for the extra layer of armor).

Armor can be exposed to some pretty rough treatment, and may degrade after suffering significant punishment, but this circumstance is best left to role-playing rather than number-crunching.

Regular armor, described earlier, is only half as effective (round down) versus gunfire. If you roll 5 points of protection for your reinforced jacket, it only stops two points of damage against a gun.

Bullet-Proof Armor

The rating for bullet-proof armor represents the number of dice rolled when hit by a bullet or shotgun. Divide the damage by this number. (On a roll of a 1, the armor has no effect, meaning that the bullet hit an area not protected by the armor.)

Against normal attacks, such as knives and punches, subtract the armor’s rating from the damage.

For example, if you rolled a 5 for your bullet-proof vest, you would divide the incoming damage by 5. If someone stabbed you with a knife, however, you would only subtract 1 point from the damage.

When a character wears both types of armor, handle the regular armor first, and then the bullet-proof armor.

Bullet-proof armor has a “b” by its rating in order to differentiate it from normal armor.

Table 6 Armor Ratings

Type	Rating (points)	Penalty?
Leathers	1	No
Armored Jacket	1	No
Plate Mail	2	Yes
Bullet-proof Vest	1b	No
Bullet-proof Suit	2b	No
Military Body Armor	3/2b*	Yes

*First number is regular armor, second is bullet-proof armor.

Table 7 Armor/Attack Summary

Attack	Normal	Bullet-Proof
Normal	full	minimum
Bullet	half	divide
Armor Piercing*	minimum	minimum
Hollow Point**	double	divide double

*Divide damage from armor piercing bullets by 2 after armor points have been deducted.

**Hollow point bullets have +2 added to the damage factor.

divide: divide damage by roll

divide double: divide damage by double the roll

double: subtract double the roll from damage

full: subtract full roll for the armor from damage

half: subtract half the roll for the armor from damage

minimum: subtract number of dice (not roll itself) from damage

Recovery

For game purposes, assume that about half of damage (in terms of hit points lost) comes from pain and shock. Only the other half is “permanent.” Thus, after a fight is over and the characters have some time to rest, every character recovers half of the lost hit points.

Hit Point Recovery Conventions

1) The character recovers hit points when the GM sees such recovery as reasonable. Generally, after a character receives some rudimentary first aid and has a chance to regain spent strength, the hit points return. Alternately, the GM may allow recovery under special circumstances, as when an impressive leader orders an incapacitated follower to get up and keep moving, or when dire need arises.

2) Hit point level after recovery is halfway between the wounded level and the last level after recovery. Do not use the starting (unwounded) level of hit points as a base unless the character started the fight unwounded. For example, a character takes 10 points of damage and drops from 22 to 12 hit points. He then recovers half the lost hit points and now has 17 hit points. Again he takes 10 points of damage, dropping to 7 hit points. He recovers to halfway between 7 and 17, not to half-way between 7 and his normal level of 22. He now has 12 hit points and will only get more through medical attention or prolonged rest.

3) Round hit points up, if half-way recovery results in a fraction. (This means that being wounded for 7 points twice will leave you 6 points down from normal, whereas being wounded for 14 points once will leave you 7 points below normal. Multiple small wounds are slightly easier to recover from than a few large wounds.)

4) The GM can require rolls of any kind to determine whether a character recovers. For example, if very little time has passed since a fight (normally not enough to allow any recovery), the GM may allow someone trained in first aid to make a roll, and only a success in the GM's eyes will allow hit point recovery.

5) The GM has the right to change the recovery from half-way to more or less than that. For example, it might be relatively easy to recover from being beaten with fists (two-thirds of the loss recovered), and relatively difficult to recover from serious gunshot wounds (one-third recovered). The GM has sole arbitrating power over this variation, so she can make the system as complex or as simple as she cares to.

Special Effect Attacks

When a character tries an attack that is intended to do more than just some damage, the attack roll is made normally, but only half the normal damage is done. The special effect succeeds only if the attack roll exceeds the defense roll by an amount the GM judges to be sufficient.

Special effect attacks include tackling, disarming, knocking your opponent's feet out from under him, immobilizing a limb, headlock, and so forth.

Attacking from Advantage

Whenever you have the edge over an opponent because of something besides your traits, you can ask the GM to give you a bonus die on your combat roll. Common advantages are:

Ganging Up

Someone can defend normally against one opponent for each die they have in fighting ability. (An average person, therefore, can defend normally against two attackers.) Each additional attacker receives a bonus die on attacks against that character. The defender gets to choose which attackers get the bonus die.

Attacking With Surprise

The GM might require a roll to see how stealthy you are compared to how alert your target is. If you hit the guy when he's totally unaware, the GM might grant you more than just a bonus die.

Better Weaponry

If you have a club and your opponent is bare-handed, you've got an advantage (better reach, something to block with that doesn't bleed, and a psychological edge). The same goes if you have a sword against someone's switchblade. Remember that this bonus die depends not on how much damage you do, but on how handy the weapon is in combat. Imagine you have a quarterstaff and your enemy has an axe. He does more damage, but in terms of reach and blocking ability his weapon is no better than yours, so he doesn't get a bonus die. If he had some weird science vibrating knife that did horrendous damage, you'd get the attack bonus because the

quarterstaff is longer and better for parrying. Of course, if he hit you, you'd suffer worse than he would if you hit him.

Better Position

On top of them, above them, behind them, and so forth.

Psychological Advantage

You've just convinced your opponent that their chances of beating you are nil. The next round (only) you get a bonus die on your rolls. Using a nasty-looking weapon helps a lot, even if it's no more effective than a regular one.

Or, if your seven-year-old daughter is whimpering helplessly in the closet behind you as you defend her from a maniac, you get a bonus die on your rolls for the duration of the combat.

Supporting Characters

Supporting characters are created and fleshed out during the game by any participant, and portrayed by the GM.

They break into two types: minor and recurring. This is mostly a bookkeeping distinction, sorting the tangential figures from those who will play an important ongoing role in the series.

The GM, or a player given bookkeeping responsibilities, should keep a list of characters appearing in the series, updating it as necessary. Separate them into the two categories, with special attention paid to the recurring characters.

Minor Characters

Minor characters provide obstacles during procedural scenes. They do not tie into the desires of main cast members or satisfy their emotional needs.

Alternately, they may be mentioned in passing, without taking a central role in the scene. They're the equivalent of Shakespearean spear-carriers.

Many recurring characters start out as minor, then become more important when a PC develops an emotional need they can fulfill.

Introducing Minor Characters

Characters are introduced for the first time either by the caller, at the top of a scene, or by any participant, while a scene is already in progress.

When bringing in a new character, give him or her a name and a brief description, no more than two or three clauses long. The brief description indicates the minor character's role in the world or story, giving the GM enough of a starting point to portray him.

Recurring Characters

A player can promote a minor character to recurring status by making him or her the object of his character's emotional needs.

Some characters start out as recurring, when their first appearance is a dramatic scene in which they are called upon to grant a PCs' petition.

Players may establish relationships to recurring characters promoted by other players. Do this during any scene featuring both your character and the recurring character.

Recurring characters may act as petitioners, seeking grants from players, but never other recurring characters.

The GM keeps a single pool of drama tokens which represents all of the recurring characters. This is distinct from the kitty. It is possible, for example, to make a force for one recurring character using two tokens garnered by granting on behalf of two other recurring characters in two separate previous scenes.

Introducing Locations

Any participant can introduce a new location in which a scene can take place, or to which a scene in progress can logically shift. (For example, a scene that takes place during a journey might start on a road and end up in a swamp.) The caller, or any participant during a shift in location, provides an introductory description of the place, which other participants can then elaborate on. They can do this as the scene progresses, or in a later scene set in the same place.

Once you establish a few basic locations, you'll find the story often returning to them, like the regular sets in a TV show.

A participant who feels that an introduced location detail is out of bounds can challenge it on one of the following grounds:

- ⤴ **Consistency:** The description is anachronistic or otherwise unsuited to the established setting and genre.
- ⤴ **Continuity:** The description is inconsistent with what has already been established.
- ⤴ **Tone:** The description is somehow ridiculous.
- ⤴ **Believability:** The description defies common sense.

If the GM agrees that the detail fails one of the above tests, she allows a challenge, as per the standard rules.

Bennies

DramaSystem rewards the players who most consistently and entertainingly enact their dramatic poles.

Gaining Bennies

At the end of each session, each player in turn (in seating order) makes a brief statement, highlighting how he entertainingly brought out his character's dramatic poles over the course of the session, in relation to the episode's theme.

When a player is unable to articulate a case, the GM makes it for him.

All participants then vote, ranking the other players in order, with #1 the best score, #2 second best and so on. The argument is just a reminder: voters base their rankings on how well the players brought out their dramatic poles in relation to the theme, not how skillfully they made their cases. Moving from one pole to another in the course of an episode is a good thing. Vote against players who, episode in and episode out, stress a particular pole and ignore the other. Players do not rank themselves. No one ranks the GM, who never gets bennies. The GM votes, too, ranking all of the players.

The GM then totals each player's vote tally. The number of drama tokens a player has in hand is then subtracted from this number.

The two players with the lowest scores gain one bennie each¹.

For portable computer users, a simple spreadsheet speeds the tallying.

Tied Results

If two players are tied for the lowest score, each gets a bennie. The second place finisher(s) does not.

If two players tie for second place, both of them gain bennies, as does the player in first.

If three or more players tie for first, all gain bennies.

Spending Bennies

When you have a bennie, you can spend it on narrative benefits that kick in during play. Once spent, you remove the bennie from your character sheet. They don't refresh; you can replace a spent bennie only by earning a new one, as above.

Cash in a bennie for any one of the following:

¹ Low score looks counter-intuitive on the page but is entirely natural in practice. It allows players to rank each other from 1 on down, with #1 being the best. Only the GM ever sees the low score.

- ✧ a dramatic token
- ✧ a procedural token
- ✧ to draw an additional card in a procedural scene
- ✧ the right to jump the queue and call a scene immediately after any other scene. The queue-jumper's next scene is skipped, after which the existing calling order is observed as per usual.
- ✧ to jump into a scene the caller wants to keep you out of
- ✧ to block another player's attempt to jump into a scene you've called. (Blocked players keep the bennies they would have spent.)
- ✧ the right to burn any 1 token held by another player. A dramatic token returns to the kitty; a procedural token is treated as spent.

You may spend only one bennie per scene.

Awarding Experience Pool Dice

Awarding these dice is entirely up to the GM. Use them to pace the progression of play. If you want to slow things down, award few. All PCs active in a session should receive the same number of dice.

Awarding few dice puts the emphasis on the real world accomplishments of the PCs. They become powerful mostly through figuring out who to trust, how to get things done, and making a reputation for themselves. If you want the series to move quickly, award plenty of dice. The more dice the PCs get, the better they will be able to handle deeper and more dangerous plots. When in doubt, award the dice.

In general, one die should be awarded for each session of worthy play, plus dice for any exceptional accomplishments. A group who struggles well, vanquishes a foe he's been after for three sessions running, and imbues his character with energetic personality might get three dice for that one session (one for a session's play, one for defeating his enemy, and one for good role-playing). At the rate of one or two dice per session, it will take a PC about three sessions to develop a new trait. If that's too slow or too fast for your style of play, be more or less generous awarding dice.

Experience

Through experience, you can improve your skills or learn new ones. Your experience is represented by your experience pool. At the end of every game session, the GM can award bonus dice to the group and these dice are added to your experience pool, as previously explained. In addition, you can "spend" the dice from your experience pool to buy new skills or improve ones you already have. Each kind of improvement requires a certain number of dice that are permanently lost from your pool and some action in the game world. The GM must approve every trait improvement, and you can improve a trait any time immediately after meeting the requirement.

Developing a New Trait

It costs 5 dice from your pool plus game-world experience to develop a new trait. If the trait is something casual, such as brawling or reading people, you can pick it up without any special training. If it is technical or specialized, such as kung fu or computer programming, you need some kind of training.

Once you have satisfied the need for training (if any) and spent the dice from your experience pool, you have one die better than normal in your new skill. If it is a technical or unusual skill, you have a score of 1 with the trait. If the trait is standard, something most people can do, if not well, then you now have a score of 3.

All such traits developed in this way are the equivalent of side traits. In other words, they are quite specific, not the global traits possible to beginning characters as central traits. You can learn to foil security systems through this method, but you cannot become a "good burglar."

Traits that are not subject to easy development might require more than a little training. For example, you cannot gain the trait "strong" just by mucking around in the underworld for a while. If you want to develop a

trait such as “strong,” you might need to undertake intense training over weeks, and a regular exercise regimen to maintain your strength once you have developed it.

Use your common sense when deciding what it takes to develop a new trait.

Invent a sign for each trait you develop.

Improving a Current Trait

For a trait listed as 1 or 2 dice, you can increase the score by 1 for every 5 experience dice you spend. Once a score is at 3 or higher, however, it becomes much harder to improve.

First, you definitely need training to raise any score to 4. This training takes at least a year, if you are carrying on other activities at the same time, or six months, if you are training full time. In addition to the training, you must spend 10 experience dice.

Raising any trait to 5 requires highly specialized, nearly full-time training. You might be able to undertake an adventure or two while training, but you will not have time to hold down a job. The training you need costs at least \$1,000 US per month, and even finding a qualified trainer will be difficult. You are more likely to find a trainer by having the right connections than by looking in the yellow pages. In addition to the training, you will need to spend 15 experience dice.

Raising a score to 6 is pretty much beyond the scope of the rules. It may not even be possible. You could shell out lots of money and spend a year working at it, and still see no significant progress. Getting such a high score is a matter of roleplaying rather than rule-playing.

Of course, some skills lend themselves to gradual development over years of time. It is possible to develop a score of 6 in a skill just by applying yourself single-mindedly for years on end, but that’s out of the scope of the game, wouldn’t you say?

The above rules are for discrete traits — side traits or those you develop during play. For your central trait, double the time and dice required.

This extra expense is required because the trait actually covers several skills.

Increasing Hit Points

If your trait relates to hit points, you may earn more hit points by developing the trait or increasing your score in it.

If this trait is the only one on which your hit points are based (or if you had no traits to improve your hit points), you may take +7 hit points or roll two dice and add the result.

If another trait besides this one had a hand in improving your hit points, then roll double the number of dice that your newly improved trait offers. This is your new hit points score. (You may not raise your hit points by more than 12 points by this method.)

For example, if a character works out and develops the trait “strong, 3 dice,” he can roll 6 dice. If this total beats his current hit points of 22, he gets the new roll as his hit points. If he manages to beat the odds and roll 35 or 36, however, he only gets to keep 34 hit points, 12 better than his previous score.

Appendix: Series Pitches

A Series Pitches is a common format for presenting DramaSystem settings. The key entries are:

Nutshell

The exciting and dynamic one-sentence logline you'll use to introduce your series to players.

Characters

Indicate to players the sorts of roles the characters might take on within the ensemble cast.

Setting

Describe the qualities of your pitch's time and place that will most directly impact the action.

Themes

In bullet points, list likely themes for episodes of your series, with or without explanatory notes indicating how they might be expressed in play.

Tightening the Screws

List a number of possible complications participants might introduce to reignite tensions within the main cast.

Names

Provide a list of sample names for people, places, and (where appropriate) things in the series. Participants use these when stumped for suitable names when inventing people and places on the fly.

Additional Elements

If you need to add another element to this format to make your Series Pitch work, do it.

Appendix: Optional Rules for Procedural Scenes

Botch

When you roll all 1's for a given action, you have botched. Not only have you automatically failed in your attempted action, but something really bad happens. The GM determines the outcome of the botch.

Note that a penalty die greatly increases your chances of a botch, which is as it should be. Likewise, a bonus die greatly decreases botch frequency.

For example, a character is trying to break through a locked door. He rolls two dice, and they come up snake-eyes. The GM rules that, not only did the door fail to budge, but he has inadvertently broken the weird device he is carrying in his pocket that he found last session.

In another example, a character is conning a gullible fellow into trusting him. Unfortunately, he is a bit tipsy at the moment, so he gets a penalty die. He rolls four dice, and they come up 5, 1, 1, 1. That comes to 3, total, and a botch. The gullible GMC rolls one die for resisting the character's schemes, and gets a 2. Even though this is lower than the 3, the character's roll was a botch, so he fails. Suddenly the "gullible little twerp" is pointing a big knife in the character's direction.

Blowing the Top Off

This optional rule eliminates the maximum from a character's rolls. If the player rolls all 6's on any given roll, he rolls another die and adds it to the total he already rolled. If that die is a 6, he rolls it again and adds it, and so on. There is therefore no upper limit to what a character could roll. If you don't like the idea of artificial limits to a character's possible roll, this system may be what you're looking for.

Keep in mind that if you use this optional rule, penalty dice and bonus dice are going to have a bigger impact than if you don't use this rule, just as is the case for the botch rule above.

The Unstoppable Six

If any of your dice are sixes, you obtain some positive result, even if you are not successful in the roll. Just what this "limited success" entails is up to the GM (of course). Also, the more 6's you get, the more powerful your "loser's revenge" will be.

For example, a character comes face to face with the shrieking ghost of an Atlantean priest. While the other PCs look disconsolately at their useless weaponry, he says that he is dredging his mind for spells that could bind this ghost to his control. The GM says he does indeed remember such a spell, and has the player roll four dice. He rolls a 13, against the priest's roll of 6, 3, 1, for a total of 10. The character wins and the GM says he can direct the spirit to inhabit a physical object. What the character doesn't know is that the ghost rolled a 6, and that the GM decides that this result means that the ghost has kept itself from being completely controlled.

Optional Rules for Combat

The GM decides when and whether to use these rules. The GM may use any given rule always, sometimes, or never.

Desperate Defense

A character normally gets one attack roll and one defense roll per attacker each round, but if you give up your attack, you may get a bonus die on each defense roll for that round.

Alternate Damage

If the attacker scores a hit, they roll one die for each number in the damage factor for the weapon. If the attack roll is twice the defense roll, the attacker multiplies the result by two.

For example, a knife does 2 dice of damage, or 2 dice times two if the attack roll is at least double the defense roll.

A character may not use bonus dice for damage rolls, only for the attack rolls.

You may use this system when an “attack roll” is not called for, such as when an explosive goes off near a character and the GM simply rolls some dice to determine damage.

Serious Wounds

In addition to losing hit points, a character can suffer a “serious wound.” Serious wounds do not always heal completely on their own.

Without medical attention, these wounds may “mis-heal” (causing a permanent impairment) at best or lead inevitably to death at worst.

Examples of serious wounds include compound fractures, internal bleeding, penetration of intestines, damage to internal organs, severed tendons, and more.

A serious wound that mis-heals without medical attention, such as a severed tendon or a compound fracture, heals at half the normal rate and leaves the character with a permanent disability, such as a penalty die on agility-related actions or the inability to manipulate certain joints.

A serious wound that leads to death, such as a severe infection or severe damage to the liver, causes the character to lose hit points every day until proper medical attention is applied. Hit points lost can be anywhere from 1 to 15 per day, depending on the wound. Such a character is usually bedridden while the doomed body makes its last-ditch effort to save itself.

A wound is usually a “serious wound” when at least 20 points of damage are suffered in a single blow, but it is possible to take a serious wound from a relatively minor attack, such as a badly broken arm that doesn’t incapacitate you but won’t heal well on its own. Another possibility is that a botched defense roll leads to a serious wound. The GM, of course, may prefer to play serious wounds by ear.

Appendix: Fringe Powers

The role of fringe powers in the game is up to the GM. If you wish, they can be relatively common, at least among the player-characters and the GMCs with whom they interact. If you prefer a more subdued game, then you can tell players their characters cannot have them and then make them practically impossible to come across.

When running fringe powers, use your imagination to adjudicate their use. The following rules are certainly open to modification and interpretation. When players invent fringe powers for their characters, they are unlikely to replicate exactly the powers described below. Try to be true to the player's vision, using these powers as guidelines for how to interpret the player's ideas, rather than as an authoritative list to which the players must conform. The same holds true when developing fringe powers for your GMCs.

Learning Fringe Powers

It generally takes a month of full-time study to learn a fringe power, and access to a knowledgeable teacher.

At the end of that time, the player decides how many dice from his experience pool to use, rolls the dice, and only if at least one of the dice is a 6 does the character acquire the power. (Better or lesser teachers, improper preparation, native inclination, and other factors may, at the GM's discretion, alter these odds.)

Optionally, the GM may rule that there is a chance that a character is psi-mute, unable to develop psychic powers. When the character first attempts to learn a fringe power, roll a die in secret. If the roll is a 1, that character is psi-mute and cannot learn fringe powers. The only way for the character to find out that he is psi-mute is to try to learn powers until he gives up. Do not use this optional rule if you think it will disappoint your players unduly.

Rolls for the acquisition of psi powers are usually made in secret. The GM simply asks the player how many dice he wishes to give up from his Experience pool, and makes the roll herself. Don't give the players any information that their characters do not have.

Upon learning his first fringe power, the character gains a psychic pool with one die in it. He may increase the number of dice in this Pool immediately by transferring dice from the experience pool (two experience pool dice can be traded for one psychic pool shot).

Using Fringe Powers

Everyone who has fringe powers has a psychic pool, representing the number of times he can use fringe powers each day. A psychic pool contains a specific number of "shots," each of which can be used each day to power one of the character's fringe powers. "Psychic pool" is the game term used for convenience, but each character should have a name representing the way the character understands the power (ch'i pool, ki pool, magic pools, mana pools, and so forth). Regardless of their names, the pools work identically, so the rules refer to them simply as "psychic pools."

When a beginning character has a psychic pool, the player rolls a die to determine the number of shots in the pool. (Alternately, the player may choose to have 3 shots in the pool instead of rolling.) A character with two or more powers can roll for each, and take the highest roll to determine the number of shots in the pool. When a character develops a power for the first time, he has 1 shot in the pool. (If a character already has a pool, developing a new power does not increase the number of shots in the pool.)

One shot can be added to the pool by subtracting 2 dice from the experience pool. So a character can give up four experience dice and add two shots to his psychic pool. He may not convert shots to experience dice.

When a character uses a fringe power, he loses 1 shot from the psychic pool. He may also “push” the power, which means he loses 2 shots from the pool, but can roll twice the normal number of dice, counting only the better half. (For example, if you have two dice in “dreamhaunting,” you can use 2 shots for a single use of that power, roll four dice, and then count the best two as your roll.)

If the power works against a being, that being gets a dice roll to resist. Most people get 2 dice. (Abilities like “strong will” or “resistance to domination” may give characters more dice to roll, at the GM’s discretion.) A psychic may use a shot from his psychic pool to resist another’s psychic power, if he knows the power is being used against him. If he uses this shot, he gets a number of dice equal to his best psychic power as bonus dice on his resistance roll. If the defending psychic has a fringe power that could counter the effects of the attacking power, he can use those dice in addition to the normal 2 dice that average people get, but must expend a shot to do so. For example, telepathy can counter mind scanning or telepathy. A 2 die telepath can expend a shot to get 2 more dice than normal when resisting a mind scan. A 2 die pyrokineticist, on the other hand, can expend a shot to resist a mind scan, but he would only get two bonus dice, not two extra dice.

Psychic shots return 100% in 24 hours. If a character has six shots in his pool, he recovers one die every 4 hours. Some entities have unusual requirements or special advantages for recovering spent psychic shots. A druid, for example, may be able to recover shots at twice the normal rate when sky-clad (naked) under the moon. He may, however, recover shots at half the normal rate when not in contact with at least one natural element (fresh air, direct sunlight, etc.).

Since a normal person gets two dice to resist abilities like telepathy, a beginner with a fringe power should try to improve his chances by making the situation more amenable to him. When trying to ferret out a secret computer password from another person, for example, he may offer the target drinks to lower his defenses and then mention computers in an effort to bring the password into his consciousness. The penalty dice the target would receive and the bonus dice the telepath can use may make up for the one die vs. two dice odds. GMs should encourage these special efforts because they add role-playing and strategy to what could otherwise just be a die roll.

Interpreting Fringe Powers

There’s no way the rules can capture all the variability of fringe powers. Play them by ear, do what feels right and seems interesting, bend to the needs of the story. If it fits the plot for a character (PC or GMC) to be able to do something with a fringe power, let it be, even if the rules don’t specify that interpretation, and sometimes even if the rules specifically disallow that interpretation.

The most common example is duration. If a power lasts “1 hour,” then some people may shake it off in 50 minutes, while others might stay

under the influence for an hour and a half. The duration is a general guide. Fringe powers do not “pop off ” after the exact duration has expired.

The same goes for distance. While a mind scanner may generally only be able to find thoughts within 10 m or so, the limit may be 100 m when searching for a good friend, 1 km when searching for an identical twin, or 10 km when searching for very powerful and uniquely evil thoughts emanating from a specific unnatural creature.

Of course, the above call for loose interpretation applies to every trait and roll in the game, but it can be especially important in making fringe powers mysterious, interesting, and non-mechanical.

Sample Fringe Powers

Note that the names given to these powers are strictly for convenience and reference within the game. Some teachers may use similar or very different names.

The powers below are only examples. Alter or ignore them as you wish, and be sure to invent others in your series.

Aura Sight

The ability to see people’s auras. The color of the aura varies with the mental and physical state of the person. By reading auras one can see someone hiding in the darkness, tell when someone is lying, tell when there is psychic interference. Most people roll 2 dice to resist this power. One can see auras better up close and when one knows or at least is able to talk to someone. An Aura Seer may also be able to see an aura around a particularly powerful (or malevolent) magical item or locus.

Healing

Directs healing energy to damaged or diseased areas, improving the natural curative powers of the subject. When curing damage, the roll on the trait equals the number of points that the character recovers. If the wounded character has not yet recovered half his lost hit points as per the recovery rules, the healer heals twice the points rolled on the dice. It takes about 30 seconds (5 rounds) for the healing to be complete, and the healer must be in contact with the injured party during that entire time. When used to heal diseases and such, the healer must roll against a Difficulty appropriate to the disease. Below are guidelines for diseases and such. A healer who rolls all 1’s when trying to heal someone of a disease acquires that disease himself, even if the disease is not normally communicable. In addition, the healer loses the ability to heal until that disease itself is cured. For an incurable disease, this event can mean losing one’s power until another healer heals him.

Common cold, cold sores, acne: 5

Addiction to nicotine or cocaine, pneumonia: 10

Leprosy, cerebral palsy, Alzheimer’s, cancer: 15

Hunches

This power may come from unconscious psychic sensitivity, the attention of a spiritual guardian of some kind, or an innate ability to move with the serendipitous forces of the universe. Roll to get irrational feelings of what you should do or hints at secrets you cannot otherwise know. Having this fringe power makes you very vulnerable to psychic manipulation.

Lightning Strike

Channels energy through nerves, muscle, skin, and bone, making them unnaturally fast and strong (faster, indeed, than the actual electrochemical nerve signals sent by the brain).

Add your dice with this ability to attack rolls when striking with your bare hands, feet, or other natural implement of destruction.

Mind Scan

Called “tuning in” by its less traditional masters, this discipline involves sensitizing one’s own mind to the constant psychic chatter put out by other sentient beings to the point that one can decode another’s thoughts.

When scanning for thoughts, the mind scanner can find thoughts within his dice roll in meters. If someone wants to see if someone is lurking in the closet before opening the door, he need only roll a 1, but scanning an apparently empty building is beyond all but the grandmasters of this discipline.

To scan a mind for actual thoughts, a mind scanner must be able to see or otherwise sense the target. If the target is in sight, the range for the power becomes 2 meters times the roll. If the roll is high enough for the range, compare the mind scanner’s roll to the target’s. If the character beats the target’s roll, he learns what that person is thinking. If the character rolls double the target’s roll, he finds clear information, as well as any related memories or ideas.

For example, an average scanner tries to scan someone across a bar for a computer password. The target is 7 meters away. A roll of 3 or lower means that contact is not even made. A roll of 4 or higher means contact is made, but the target gets a resistance roll (2 dice, unless he has some unusual traits).

Pre-Reaction

Channels energy backward in time to stimulate motor nerves previous to perceiving a danger.

The character may roll to respond to something just before it happens, such as dropping to the ground just before an explosion goes off. If he would normally have a chance to respond to something, then he can add these dice to his normal roll. (E.g., if a car is hurtling toward him and he needs to jump out of the way, he would normally get to make a roll based on his reflexes or speed; he could add Pre-Reaction dice to the roll.) If he would not normally get a roll, then he can still use these dice, but only these dice. (E.g., a poisoned dart thrown from behind by a silent assassin would not normally allow a character to dodge it, but he could use these dice to do so.)

One cannot pre-react to an event one would not notice. If someone points an invisible, intangible ray in a character’s direction, he cannot prereact to it because his future self will not notice it and therefore cannot send energy back to his present self to protect him.

Roaming Eyes

Allows one to see other places or times. Each Eye Roamer can see either in the present at a distance or in the past but in the same location.

Present, distant: The Eye Roamer must have some connection to the place being observed, such as knowing someone there, having been there and checked it out, etc. The Eye Roamer can specify viewing the surroundings of a person or object, or he can view a certain area.

Range is the roll times 100m (or more, if there is a very good connection to the person or place). Duration is the roll in rounds.

Past, here: The Eye Roamer can see into the past up to one hour times the roll. For very important or emotionally-laden events, especially if the Eye Roamer knows something about it, the distance into the path may increase to the roll in days, weeks, or even centuries.

Other senses: Some psychics send their ears (or even noses) the way Eye Roamers send their eyes.

Sending

Sending your thoughts to the minds of others. The character must know the recipient well or see him in order to Send. The recipient “hears” the thought as if it were spoken (but knows it’s only “in his head”). The die roll for this power represents the number of minutes one can continue sending, and must be higher than the target’s resistance roll (if the target chooses to resist). The die roll also determines range: the roll times 10 meters if the Sender does not know the target, or the roll in kilometers if the Sender knows the target well.

Skin of Iron

By developing an inflexible image of his own physical body, a character can conduct his energy so as to maintain this image in the face of injury. Blows of all kinds must overcome the physical resistance of the flesh as well as the parapsychical resistance offered by the energy.

The total on the dice is subtracted from damage on each blow you take, like normal armor. The highest number among the dice equals the number of blows you can absorb before Skin of Iron wears off (with a maximum duration of 10 minutes). If you are unhappy with your roll, you may use more psychic dice and roll again, taking the new result only if it is higher.

Telekinesis

Moving, lifting, and manipulating objects at a distance. The number rolled equals the number of kilos that can be pushed along a surface, the distance in meters over which one can use the power, the number of seconds one can maintain the power. The object to be affected must be seen. The telekineticist can move the object about, spin it, or otherwise manipulate it. The telekineticist can also lift objects into the air, up to 100g times his roll (or one-tenth the weight he can push).

Telekinetic Punch

Creates a burst of explosive force that can break, topple, or harm objects or people. The roll equals damage done and the distance over which the force can act. If used to break in a door or perform other feats of strength, the roll is equivalent to a normal strength roll.

Telepathy

Essentially a combination of Mind Scan and Sending, but weaker than either. The Telepath cannot scan for thoughts like a Mind Scanner can.

He can read minds, but only at a range equal to the roll in meters. He can send thoughts, but the range is the roll times 5 meters (for people in sight) or times 500 meters (for out of sight, works with well-known friends and acquaintances only). Unlike the Sender, a Telepath can have a two-way conversation with a target, but only if the target wills to respond.

Appendix: Magic

There are hundreds of different styles of magic from various cultures and traditions around the world, but for the sake of mechanics they can be broken down into two types: free form and spell-casting.

Free form magic is essentially equivalent to fringe powers. The better one's roll, the more effect the magic has. You can use fringe powers like those described above to represent free form magic.

Spell-casting is the use of specific spells that have pre-determined effects. Your roll determines whether the spell takes effect, not its power.

The GM may wish to limit who can learn spells at all, or limit PCs' access to spells and magical knowledge, depending on the role you wish magic to take in your series. You may apply any or all of the following restrictions:

Intense Study. Only years of study, preferably with a learned master, can make one capable of casting even the simplest spell. This restriction effectively nixes PCs learning spells, unless they begin the game as wizards.

Rare Talent. Only few people can learn magic at all (one in six? two in six?). You may rule that anyone who has developed another kind of fringe power already is unable to learn magic because their supernatural potentiality has been corrupted.

Rare Resources. Resources are hard to come across. Spell books may be written in an ancient or foreign language, or in code, so even if PCs find them, they may be worthless to them. The few wizards who exist probably do not admit to their nature and certainly will not accept students who have not proved their utmost loyalty and discretion.

Magic becomes something special if it is something rare.

Learning a Spell

When studying a spell in order to learn it, a character must spend a week studying at least 2 hours per day and sacrifice 5 experience dice. He then rolls a single die. If the number at least equals the spell's level, he has learned the spell. If not, he records a "1" on his character sheet to represent the number of dice he has rolled to learn the spell. He may then spend another week studying and sacrifice another 5 experience dice, after which he rolls 2 dice. Again, if the roll at least equals the spell's level, he has learned it. Otherwise he changes the "1" to "2." representing how far he has progressed in studying the spell. He repeats this process, rerolling with one more die for each week and 5 experience dice expended until he gives up or learns the spell. If the character does not have a psychic pool when he learns a spell, he gains 1 shot in that pool.

If the character botches on any roll to learn a spell, bad things can happen.

For example, suppose a character tries to learn the 12th level spell, Unswerving Arrow. The GM has not told him the level of the spell, but she has said that he can tell that it's pretty difficult. He begins studying the spell

(actually spending four hours per day, since he does not have a teacher to tell him that the extra two hours are wasted), and at the end of a week he expends the experience dice and rolls a single die. He gets a 5, not good enough. The GM says that he thinks he is getting the hang of it, but he still can't manage the spell. He keeps trying, and after another week and another 5 experience dice, he rolls 2 dice, this time getting a 4 — failure. After two more weeks and 10 more dice, he rolls (on four dice) a 13, good enough. The GM now informs him that he knows the spell and that he has one shot in his Psychic Pool. He immediately takes two more dice from his experience pool and gives himself a second shot in the psychic pool. He has now spent 22 dice from his experience pool, and he can cast his spell twice per day.

Casting a Spell

To cast a spell, a character expends one shot from the psychic pool. Under normal conditions, the spell always works. The GM may require rolls for targeting the spell correctly or maintaining concentration, depending on the spell, the situation, and her discretion.

Remember that many magicians use free-form magic, which works like standard fringe powers. Spell-casting proper, however, is very reliable.

The target may get a resistance roll against spells that directly affect the mind or body, in which case the level of the spell always counts as its “strength.” A resistance roll at least equal to the spell's roll generally resists the spell's effects.

Sample Spells

There are an incredible number of spells available for those who can find them and learn them, so do not worry about a definitive spell list.

Instead, invent interesting spells as they are needed. If the characters discover a wizard's spellbook, it might have four spells in it. Invent those spells. If they encounter a wizard, she may know seven spells. Invent those spells as you need them. Like fringe powers, spells should be individually crafted for the episodes in which they appear.

As magic spells have developed over the years, wizards have learned that the best way to kill someone outright is with a gun or other simple weapon. The spells that are most common, therefore, are those that do not replicate a gun's effect. Spells that have weird effects (not easily reproducible by technology) are much more common than those that simply cause damage.

Below are sample spells to show appropriate levels for spells of various power.

Lurking Chains, Level 3

Creates the sound of clanking chains in thin air anywhere within 20m of the caster. The sound travels about slowly (about 2m/round) in random directions, but it tends to follow hallways and such. (It does not travel through walls.) The clanking lasts ten minutes. Wizards use it as a distraction.

Blessed Black, Level 6

Extinguishes all sources of light within 10m of the caster for one minute, though the caster can also end the spell at will.

Serpent's Tongue, Level 9

Makes the caster's words more effective, whether they are used to seduce, intimidate, convince, or persuade (bonus die on all appropriate rolls). Lasts 1 minute.

Grip of Stone, Level 12

Paralyzes one person or animal within 15m. The target can roll strength or a similar trait to resist, escaping the effects of the spell if the roll at least equals the wizard's roll to cast the spell. Paralysis wears off within half an hour.

Ring of Gyges, Level 15

Makes the caster invisible for 10 minutes. Dogs tend to be disturbed by the caster's presence. The name refers to a ring of invisibility from Greek myth.

Seven Shields of Glory, Level 18

Creates seven invisible shields that protect the caster. All weapons bounce harmlessly away from him as soon as they strike within 10 cm of his body. For a split-second one can see a shimmering shield half a meter in diameter appear to deflect the weapon. If the wizard is struck by several attacks at exactly the same instant and the seven shields cannot guard against all the blows, some will get through. The spell lasts an hour.

Appendix: Easy Gunfire Example

Two characters have unwittingly cornered a desperate operative in a docked ship. The operative, armed with a .22 revolver, fires a shot at the first character from his hiding place. He is within short range (8m away), so the character gets two dice for his defense roll. The operative is a crack shot (4 dice) and has leisure to aim (bonus die). The GM rolls a 16 versus the character's 6, that's a difference of 10 points, times 3 for the damage multiplier of a small caliber pistol, is 30 points of damage. The character is wearing a reinforced jacket and rolls 3 for the armor, but it's divided by 2 because regular armor doesn't work too well against bullets, so the armor stops only 1 point of damage. The character takes 29 points of damage, dropping him to -7. Since 29 points can kill the average person outright, the GM rules that the shot was a solid chest hit, and that the character could be dead. (She won't bother to rule precisely on his state of injury until the second character takes the time to check him out.)

The second character breaks for the door, weaving as she goes. The GM rules that the operative is a good enough shot to fire on her before she moves out of short range, so she only gets two dice for distance, but she gets a third die for moving and four bonus dice for dodging. (The average character gets 2 bonus dice, but the character is extremely agile.) The GM rolls four dice and gets 17.

The player rolls seven dice and takes the best three: 15. Her character takes 6 points of damage. Luckily, she is secretly wearing a bullet-proof vest, and she rolls 4 on her one die. Six divided by 4 is one and a half, rounded off is 2 points of damage. With a nasty bruise, the character hustles out of the room.

As you see, a revolver using standard ammunition isn't very different from any other weapon, except for the new armor rules. More advanced firearms and specialized ammunition, however, requires some special rules.

Example of Armor-Piercing Rounds and Hollow Point

For example, if the operative in the earlier example had been using armor-piercing rounds, the 29 points of damage he did to the first character would have been divided in half to 15 points. The second character's armor, however, would have reduced the damage only 1 point, rather than dividing it by 4, so she would have taken 5 points instead of 2.

If the operative had been using hollow points, his damage factor would have been X5 instead of X3, and he would have done 50 points of damage to the first character. The character's roll of 3 for his armor, however, would have been doubled to 6, so he would have suffered only 44 points total, just enough to kill him. The bullet hitting the second character would have done 10 points of damage instead of 6, but her roll of 4 would have been doubled to 8, so the bullet would have only done 1 point of damage. (Ten divided by 8 is 1.25, which rounds off to 1.)

Armor Examples

For example, a reinforced jacket (rating: 1) would stop 1 die of damage from a knife, 1 die divided by 2 from a bullet, 1 point from an armor piercing round, or 1 die times 2 from a hollow point shell.

A bullet-proof vest (rating: 1b) would reduce normal damage by 1 point, would divide bullet or shotgun damage by the number rolled on 1 die, would reduce damage from an armor-piercing round by 1 point, and would divide safety slug damage by double the roll on a die.

A reinforced jacket over a bullet-proof vest would stop 1 die +1 point from normal attacks. Against a bullet, it would first stop 1 die divided by two (for the jacket), and then divide the remaining damage by a roll on 1 die (for the vest). Against an armor-piercing round, it would reduce damage by 2 points, one for the jacket and the other for the vest. Against a hollow-point round, it would first subtract double the roll on one die (the jacket), and then divide the result by double the roll on one die (for the vest).

Glossary of Game Terms

Bennie: a game reward you can exchange for various advantages in play.

Bonus Die: An extra die rolled with the normal dice for an attempted action when the character has some advantage. Drop out the lowest die before tallying the total for the roll.

Drama token: a game currency encouraging players to strike a balance between rebuffing and granting petitions .

Dramatic scene: a scene of verbal conflict over an emotional objective.

Episode: a single storyline featuring your continuing characters.

Experience Pool: The number of dice that a character can use as bonus dice each game. They double as a measure of experience and can be “spent” to improve traits or develop new traits.

Fraught relationships: The first and second PCs you name as your desired source of emotional reward

Fringe Powers: Powers not readily recognized as possible by the mundane world, including abilities that could be classified as psychic or magical.

Game Moderator (GM): the person who coordinates the series (i.e. “gamemaster”). A single participant who takes a guiding role in shaping the pace of the narrative and facilitating collaboration between players.

GMC: Game Moderator Character (i.e. NPC, or non-player-character), a character run by the game moderator.

Granter: the character in a dramatic scene who can either give the petitioner what he wants, or withhold it; can be seen as the object of the scene.

Hit Points: A measure of a character’s ability to take damage and punishment. If reduced to 0 hit points, you’re down and out of the fight. A character deep in the negatives is either dead or will die without medical care.

Minor character: a named supporting character to whom no PC has an emotional relationship.

PC: Player character, a character run by one of the players.

Penalty Die: An extra die rolled with the normal dice when the character has some disadvantage. Drop out the highest die before totalling the roll.

Petitioner: the character who initiates a dramatic scene in pursuit of an emotional goal; can be seen as the subject of the scene.

Player: one of several participants who takes on the role of one protagonist in the ensemble cast.

Procedural scene: a scene in which a PC or PCs strive for an external or practical goal.

Procedural token: a game currency allowing players to influence their success or failure in procedural scenes.

Psychic Pool: Represents how often a character can use psychic or fringe powers.

Recurring character: important supporting characters who can take part in dramatic scenes with PCs.

Round: In combat, or other intense encounters, a unit of time in which a character can generally take one action. Represents about 3 seconds of time in the game world.

Series: a string of related game sessions, a “campaign.”

Session: a single meeting of your game group.

Trait: A feature of a character, representing a skill, personal characteristic, fringe power, talent, or aspect of one’s background. Traits are usually good, but some (called “flaws”) are bad.

1. Definitions: (a) "Contributors" means the copyright and/or trademark owners who have contributed Open Game Content; (b) "Derivative Material" means copyrighted material including derivative works and translations (including into other computer languages), potation, modification, correction, addition, extension, upgrade, improvement, compilation, abridgment or other form in which an existing work may be recast, transformed or adapted; (c) "Distribute" means to reproduce, license, rent, lease, sell, broadcast, publicly display, transmit or otherwise distribute; (d) "Open Game Content" means the game mechanic and includes the methods, procedures, processes and routines to the extent such content does not embody the Product Identity and is an enhancement over the prior art and any additional content clearly identified as Open Game Content by the Contributor, and means any work covered by this License, including translations and derivative works under copyright law, but specifically excludes Product Identity. (e) "Product Identity" means product and product line names, logos and identifying marks including trade dress; artifacts; creatures characters; stories, storylines, plots, thematic elements, dialogue, incidents, language, artwork, symbols, designs, depictions, likenesses, formats, poses, concepts, themes and graphic, photographic and other visual or audio representations; names and descriptions of characters, spells, enchantments, personalities, teams, personas, likenesses and special abilities; places, locations, environments, creatures, equipment, magical or supernatural abilities or effects, logos, symbols, or graphic designs; and any other trademark or registered trademark clearly identified as Product identity by the owner of the Product Identity, and which specifically excludes the Open Game Content; (f) "Trademark" means the logos, names, mark, sign, motto, designs that are used by a Contributor to identify itself or its products or the associated products contributed to the Open Game License by the Contributor (g) "Use", "Used" or "Using" means to use, Distribute, copy, edit, format, modify, translate and otherwise create Derivative Material of Open Game Content. (h) "You" or "Your" means the licensee in terms of this agreement.

2. The License: This License applies to any Open Game Content that contains a notice indicating that the Open Game Content may only be Used under and in terms of this License. You must affix such a notice to any Open Game Content that you Use. No terms may be added to or subtracted from this License except as described by the License itself. No other terms or conditions may be applied to any Open Game Content distributed using this License.

3. Offer and Acceptance: By Using the Open Game Content You indicate Your acceptance of the terms of this License.

4. Grant and Consideration: In consideration for agreeing to use this License, the Contributors grant You a perpetual, worldwide, royalty-free, non-exclusive license with the exact terms of this License to Use, the Open Game Content.

5. Representation of Authority to Contribute: If You are contributing original material as Open Game Content, You represent that Your Contributions are Your original creation and/or You have sufficient rights to grant the rights conveyed by this License.
6. Notice of License Copyright: You must update the COPYRIGHT NOTICE portion of this License to include the exact text of the COPYRIGHT NOTICE of any Open Game Content You are copying, modifying or distributing, and You must add the title, the copyright date, and the copyright holder's name to the COPYRIGHT NOTICE of any original Open Game Content you Distribute.
7. Use of Product Identity: You agree not to Use any Product Identity, including as an indication as to compatibility, except as expressly licensed in another, independent Agreement with the owner of each element of that Product Identity. You agree not to indicate compatibility or co-adaptability with any Trademark or Registered Trademark in conjunction with a work containing Open Game Content except as expressly licensed in another, independent Agreement with the owner of such Trademark or Registered Trademark. The use of any Product Identity in Open Game Content does not constitute a challenge to the ownership of that Product Identity. The owner of any Product Identity used in Open Game Content shall retain all rights, title and interest in and to that Product Identity.
8. Identification: If you distribute Open Game Content You must clearly indicate which portions of the work that you are distributing are Open Game Content.
9. Updating the License: Wizards or its designated Agents may publish updated versions of this License. You may use any authorized version of this License to copy, modify and distribute any Open Game Content originally distributed under any version of this License.
- 10 Copy of this License: You MUST include a copy of this License with every copy of the Open Game Content You Distribute.
11. Use of Contributor Credits: You may not market or advertise the Open Game Content using the name of any Contributor unless You have written permission from the Contributor to do so.
- 12 Inability to Comply: If it is impossible for You to comply with any of the terms of this License with respect to some or all of the Open Game Content due to statute, judicial order, or governmental regulation then You may not Use any Open Game Material so affected.
- 13 Termination: This License will terminate automatically if You fail to comply with all terms herein and fail to cure such breach within 30 days of becoming aware of the breach. All sublicenses shall survive the termination of this License.
- 14 Reformation: If any provision of this License is held to be unenforceable, such provision shall be reformed only to the extent necessary to make it enforceable.
